

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

Ph.D. Entrance Examination Syllabus

The entrance exam will be conducted in two parts.

Part A. Research Aptitude (40 marks).

This is common to all faculties viz.

- Faculty of Engineering and Technology
- Faculty of Medical & Allied Health Sciences
- Faculty of Pharmacy
- Faculty of Natural Sciences
- Faculty of Computer Applications & Information Sciences
- Faculty of Humanities and Social Sciences
- Faculty of Commerce and Management
- Faculty of Nursing

Paper B. Domain Specific (60 marks)

Syllabus for Part A (Research Aptitude)

(Except Kannada — refer to page no. 72 for the Kannada Research Aptitude syllabus)

- 1. Research Fundamentals and Methodology:** Introduction to the meaning, objectives, and significance of research; types, characteristics, and philosophical approaches such as positivism and post-positivism.
- 2. Defining the Research Problem:** Identification, selection, and formulation of a research problem through systematic literature review and problem analysis.
- 3. Research and Sampling Design:** Concepts and types of research design; probability and non-probability sampling techniques, and determination of sample size.
- 4. Methods of Data Collection:** Primary and secondary data collection methods including surveys, interviews, observations, and ICT-based tools.
- 5. Processing, Statistics and Data Analysis:** Data classification, tabulation, and application of statistical tools for analysis, interpretation, and inference.
- 6. Application of ICT in Research:** Use of digital tools, databases, and online platforms in data collection, analysis, and dissemination of research outcomes.
- 7. Thesis, Interpretation, and Report Writing:** Structure and format of theses and research reports; techniques for interpretation and scientific article writing.
- 8. Research Ethics and Intellectual Property Rights:** Principles of ethical research, plagiarism prevention, publication ethics, copyright, patents, and IPR.
- 9. Intellectual Property Rights:** Overview of copyright, patents, and other forms of intellectual property, emphasizing their importance in protecting research and innovation.
- 10. Emerging Trends in Research:** Recent developments in interdisciplinary, translational, and data-driven research, including AI and open-access systems.

Syllabus for Part B

(Domain Specific)

Faculty of Engineering and Technology

Civil Engineering

1. **Engineering Mechanics:** System of Coplanar Forces, Centroids and Moment of Inertia, Friction, Kinematics of a particle, Kinematics of rigid bodies, Momentum and Energy principles.
2. **Strength of Materials:** Simple Stresses and strains, Shear force and bending moment, Shear stresses in beams, Principal stresses and strains, Direct and bending stresses, Columns and struts, thin cylinders.
3. **Fluid Mechanics:** Fluid statics, pressure measurement, buoyancy & floatation, fluid kinematics, fluid dynamics, flow measurement, orifices, mouth pieces, notches, weirs, flow through pipes, dimensional analysis and models, laminar flow, turbulent flow in pipes, boundary layer theory, flow through channels, rapidly varied flow.
4. **Surveying:** Measurement of Horizontal distances, Chain surveying, Measurement of angles, Measurement of Elevations, Theodolite Surveying, Tacheometric Surveying, Curves.
5. **Theory of Structures:** Fixed Beams, Continuous Beams, Moving Load, influence lines, Strain.
6. **Concrete Technology:** Cement, Aggregates, Water, Admixtures, Fresh Concrete, Properties of Hardened Concrete.
7. **Geotechnical Engineering:** Structure of soil, Three Phase System, Index Properties of soils, Classification of Soils, Soil Water and Effective stress principal, Permeability of soils, Consolidation, Compaction, Shear strength, Exploration and in situ soil measurements.
8. **Water Resources Engineering:** Hydrology, Precipitation, Infiltration, Evaporation and evapo-transpiration, Run-off, Hydrographs, Floods, Ground water hydrology, Irrigation.
9. **Environmental Engineering:**
 - i. **Water Supply Engineering:** Introduction to Water Supply, Quality of Water, Sources of Water, Raw Water Conveyance, Treatment of Water, Distribution of Water.
 - ii. **Sanitary Engineering:** Sewage and Sewerage, Sewer Design, Sewer Appurtenances, Sewer Pumping, Waste Water Characteristics, Sewage Treatment, Effluent Dispose.

Mechanical Engineering

1. **Prime movers** - Classification of I. C Engines - 2 Stroke & 4 Stroke Petrol & Diesel Engines. Concept of Mechanical efficiency, BHP & IHP, Laws of 1st & 2nd Thermodynamics, zeroth Law, applications.
2. **Turbines**- Steam turbines, Gas turbines and Water turbines - Parts, classification and applications.
3. **Refrigeration & Air-conditioning** - properties, COP, unit of Refrigeration, Refrigeration effect, Tonne Refrigeration, Ice making capacity. Types of refrigeration system.
4. **Manufacturing Process** - Part of a lathe, operation in a lathe. Types of Drilling Machine, operation a Drilling machine. Types of milling machines, operation on milling machines. Grinding machines, bonding materials, grinding terminology. Types of grinding machine, Soldering, brazing & welding classification & types. Lubrication & bearing types.
5. **Power transmission** - Belt drives, gear drives.
6. **Heat treatment of Metals** - Annealing, Normalizing, Hardening, Tempering, Carburizing, Cyaniding, Nitriding and Flame hardening, Iron-Carbon equilibrium diagram.
7. **Engineering Materials** - Ferrous and non-ferrous metals and their applications.

Electronics and Communications Engineering

1. **Analog Circuits** - BJT and MOSFET, Diode Circuits, Amplifiers, op - Amp Applications.
2. **Network Theory** - Basic Concepts, Network Theorems, 2-Port Network parameters.
3. **Signals and Systems** - Continuous-time signals, Discrete-time signals & LTI Systems.
4. **Electrical Machines** AC & DC, Transformers.
5. **Simplification of Boolean Expressions** - Karnaugh maps combinational logic Design.
6. **Sequential logic circuits** - Flip flops & counters, shift Register

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

7. **Control Systems** - Transfer function, Frequency Response, Time response of second order control systems, nyquist criteria - Bode plots, phase & gain margins.
8. **Communication** - Analog communication, Digital Communication.
9. **Power Electronics** - Thyristor, Choppers & Inverters.
10. **Electromagnetics** - Electric & magnetic fields, max wells equations, Transmission lines.
11. **Microprocessors** - Architecture, operation, programming and interfacing.
12. **VLSI Circuits** - MOS Transistors, Fabrication, Scaling of MOS Circuits, FPGA Based Systems, Testing and Verifications.
13. **Transducers.**

Computer Science & Engineering

1. **Discrete Mathematical for Computer Science** - Fundamentals of Logic, Principals of Counting and Relations and Functions.
2. **Computer Organization and Architecture** - Basic Structure of Computers, Input/output Organization, Pipeline and Vector Processing.
3. **Data Structures and Applications** - Array Operations, Strings, Stacks, Queues, Trees and Graphs.
4. **Operating Systems** - Process Management, Multithreaded Programming, CPU Scheduling and Deadlocks.
5. **Application Development using Python** - Lists, Pattern matching with regular Expressions, Classes and Objects.
6. **Database Management System** - Introduction to SQL, Relation Database Design-Functional Dependencies, Introduction to No SQL.
7. **Design and Analysis of Algorithms** - Divide and Conquer, Dynamic Programming and Backtracking.
8. **Machine Learning and Technologies** - Concept Learning, Decision Tree Learning, Bayesian Learning and Reinforcement Learning.
9. **Software Engineering and Agile Technologies** - Requirements Engineering, System Models and Introduction to Agile and Agile Methodology and DevOps.
10. **Artificial Intelligence** - Artificial Intelligence Problem spaces and search, Heuristic search techniques.

Faculty of Medical and Allied Health Sciences

Anatomy

Unit 1: General Embryology:

- A brief account of the male and female reproductive system, gestation period - subdivisions; testis, ovary; definition of gamete; sperm, ovum, gametogenesis, migration of primordial germ cells into gonadal ridge; structure of sperm, growth of ovarian follicles, and uterine cycle.
- Principles of Family Planning (contraception), In vitro fertilisation (for integrated teaching).
- **First week of Development**
Definition and process of fertilisation, formation of zygote; cleavage, formation of morula and blastocyst; implantation; formation of decidua- its subdivision. Types of implantation and abnormal sites of implantation.
- **Second week of Development**
Differentiation of embryoblast and trophoblast; changes in the embryo blast, bilaminar germ disc changes in the trophoblast, formation of cytotrophoblast, syncytiotrophoblast, amniotic membrane, yolk sac, extra embryonic mesoderm, extra embryonic coelom, connecting stalk, formation of chorion, amniotic cavity, primary yolk sac and appearance of prochordal plate.
- **Third week of Development**
Appearance of primitive streak and primitive node; formation of intraembryonic mesoderm resulting in trilaminar germ disc; formation of notochord, buccopharyngeal and cloacal membranes, pericardial sac, paraxial, intermediate and lateral plate mesoderm, secondary yolk sac, intraembryonic coelom and allantoic diverticulum; derivatives of ectoderm, endoderm and mesoderm.
- **Fourth to Eight week of Development**
Formation of somites, neural tube, cephalocaudal folding, lateral folding, body form, stomodaeum, proctodaeum, gut and vitelline duct; subdivisions of gut into foregut, midgut and hindgut.
- **Placenta**
Formation of placenta and chorionic villi; decidua basalis; features and functions of placenta, placental circulation; abnormalities, placental barrier and types of placentae.
- **Umbilical Cord**
Formation and features of umbilical cord.

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

- **Amniotic Cavity and Twinning**

Amniotic cavity and membrane; amniotic fluid - functions,

Formation and types of twins and multiple pregnancies. Conjoined twins.

- **Teratology**

Genetical and environmental factors as causes for congenital malformations.

Unit 2: Systemic Embryology

- Development of individual organs of the respiratory system, cardiovascular system, digestive system, urinary system, genital system and nervous system. Special sensory organs (in brief), endocrine glands and mammary gland.
- Developmental abnormalities.
- Development of skeletal system, muscular system (in brief)
- Development of face, branchial apparatus and associated congenital anomalies.

Unit 3: Osteology

- Classification of bones with examples; general features, general pattern of blood supply; particular features; relations of blood vessels and nerves to bones.
- Skull - All normae and interior of skull, foetal skull, mandible. Identification of individual skull bones.

Unit 4: Muscular System

- Classification and identification of the muscles of the body; main attachments, nerve supply and actions; Actions of muscle groups on functional basis with reference to joints.

Unit 5: Arthrology

- Classification of joints, general features of different types of joints, detailed study of the following joints of the body with movements: temporomandibular, atlanto occipital, atlanto axial, shoulder, elbow, radio ulnar, wrist, carpo metacarpal joint of thumb. Hip, knee, ankle and sub talar joint. Intervertebral and sacroiliac joint.

Unit 6: Gross anatomy

- Thorax
- Cardio - Vascular System
 - Pericardium, Thoracic wall, position and parts of the heart, conducting system, blood supply and nerve supply of heart, names of the blood vessels and their distribution in the body; region wise.

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

- Developmental anomalies
- Respiratory System
 - Pleura and lungs - position, parts, relations, blood supply and nerve supply. Lungs - emphasis on Bronchopulmonary segments.
- Mediastinum - Superior - arch of aorta. Posterior - Thoracic duct, esophagus and azygos system of veins.
- Diaphragm - with nerve supply.
- Abdomen
 - Peritoneum - General disposition - horizontal and vertical; viscerae - general disposition, position, parts, relations, blood supply and nerve supply of abdominal organs.
- Pelvic Organs
 - Parts, position, relations, blood supply and nerve supply.

Unit 7: Endocrinal System and Individual Endocrine Glands (Regionwise)

- Organs, relations, blood supply, nerve supply, microscopic anatomy and normal development.
- Clinical manifestations of common endocrine disorders.

Unit 8: Nervous System and its Components:

- Parts of nervous system, meninges, ventricles, motor and sensory pathways, cranial nerves, functional areas, normal development, microscopic anatomy of neurons, motor and sensory, cortex and their blood supply with cross sectional studies and morphology of spinal cord.
- General features of medulla oblongata, pons, midbrain, cerebellum and cerebrum
- Common neurological disorders : case studies and demonstration.

Unit 9: Special Sensory Organs

- Gross anatomy of eyeball, ear, nose and tongue.

Unit 10: Lymphatic System

- Spleen and Thymus (Region wise)
- Gross anatomy of the major groups (region-wise) of the lymph nodes of the body and their drainage areas.
- Gross anatomy of the major lymphatics especially thoracic duct and its tributaries.

Unit 11: Micro Anatomy

- General Histology, study of the basic tissues of the body; functional correlation of the structural components of the organs.
- Systemic histology of concerned organs.

Unit 12: Postnatal Growth and Development

- Meaning of the terms like growth, development, principles of growth and development, types of postnatal growth, periods of growth and development and factors influencing them. Assessment of growth and development, Genetic aspects of Growth & development.
- Milestones of development, growth and development during adolescence

Unit 13: Radiological Anatomy

- Identification of normal anatomical features in skiagrams, including special radiological investigations (Barium studies, Intra Venous Urogram, Ultrasound, Hysterosalpingography, Cholecystography, CT Scan and MRI).

Unit 14: Surface Anatomy

- Surface features of the body and projections, outline of heart, lungs, pleura, liver, kidneys, ureter and important blood vessels and nerves.

Unit 15: Genetics -

- Introduction - DNA, RNA, Protein Synthesis, Mitosis and Meiosis, Chromosomes - Methodology,
- Chromosomal abnormalities - Non dysjunction, Numerical abnormalities, (Downs, Turners and Kline felters Syndrome), congenital abnormalities (structure, deletion, translocation, inversion), pedigree Q chart, types of inheritance, autosomal dominant & autosomal recessive, inborn errors of metabolism and genetic counseling.

Unit 16: Bio-medical Waste :

- Types, potential risks and their safe management.

Medical Physiology

Unit 1: History of Physiology & General Physiology

History of Physiology.

Genetic control mechanism.

Biophysics principles, Bioelectric potentials.

Growth, Development and Ageing

Regulations of Body fluids & electrolyte & applied aspects.

Unit 2: Environmental Physiology

Physiology at High attitude, Hyperbarism, Regulation of body temperature, Space Physiology; Environmental pollution- radiation, smoke, noise, industrial.

Unit 3: Yoga & Meditation

Yoga Asanas, Physiological Effects of Yoga, Physiological Effects of Meditation, Health Benefits of Yoga & Meditation.

Unit 4: Endocrine System

Introduction; Mechanism of hormone action; Endocrine functions of Hypothalamus; Anterior pituitary hormones: functions, regulation, disorders. Posterior pituitary hormones- ADH & Oxytocin functions, regulation, disorders; Thyroid hormones: synthesis, fate, functions, regulation, disorders; Parathyroid hormone: synthesis, functions, regulation, disorders. Adrenal cortex and Adrenal medulla Hormone: secretion, functions, regulation, disorders; Pancreatic hormones- Insulin & Glucagon secretion, functions, regulation, disorders.

Unit 5: Reproductive System

Sex Chromosomes, Determination, Differentiation; Functional Anatomy of Reproductive System; Puberty & Menopause ; Spermatogenesis & Testosterone ; Oogenesis; Menstrual cycle ; ovarian cycle & Ovulation; Estrogen & progesterone ; Placenta – Circulation, functions & Physiological basis of fertilization & implantation ; Pregnancy; parturition ; Lactation and contraception.

Unit 6: Cardiovascular System

General organization of CVS; Physiological anatomy of Heart; Cardiac muscle ; Excitatory and Conducting tissue; Electrocardiography: Normal ECG & abnormal ECG; Cardiac Cycle; Heart sounds; Heart rate and its regulation; Hemodynamics of blood flow; Arteries and Arterioles; Blood pressure, its regulation, applied; Microcirculation; Local Blood Flow Regulation, Lymphatic system; Oedema; Cardiac Output; Venous Return; Coronary Circulation; Ischemic heart disease; Cardiac failure; Circulatory Shock; Congenital heart Disease; Regional Circulations; Effect of exercise on CVS.

Unit 7: Respiratory System

Internal & External Respiration; Functional Anatomy of Respiratory Tract; Functions of respiratory system; Mechanics of respiration; Compliance; Surfactant; Lung volumes and capacities; Dead space; Diffusion of Gases; Respiratory membrane; Transport of O₂; Oxygen–hemoglobin dissociation curve; Transport of CO₂ ; Neural control of Respiration; Chemical control of Respiration; Pulmonary Circulation; Ventilation perfusion ratio; Hypoxia ; Respiratory adjustments in exercise; Artificial Respiration; Pulmonary function Test.

Unit 8: Kidney

Structure & Functions of kidney; Nephron- Functional unit; Juxtaglomerular Apparatus; Renal Circulation; Clearance ; Formation of urine: Glomerular Filtration, Tubular reabsorption & secretion; Concentration & Dilution of urine; Role of kidney in acid base balance; Physiology of micturition; Renal failure, dialysis; renal transplant; artificial kidney; diuretics; Composition of urine & abnormal constituents ; Renal Function Tests.

Unit 9: Special Senses

Vision: Functional anatomy of eye; Optics, Errors of refraction; Aqueous humor; Pupillary reflexes; Microscopic structure of retina, Rods & Cones, Photochemistry of vision ; dark & light adaptation; Colour vision ; Visual pathway; Visual cortex. Movements of eyeballs.

Hearing: Physiological anatomy and Functions of external ear; middle ear and inner ear; Cochlea, Mechanism of hearing; Place principle, Auditory pathway & auditory cortex; Deafness, Audiometry.

Taste: Functional anatomy of taste buds, different taste modalities, pathway, receptors of taste, pathways, applied.

Smell: Functional anatomy of receptors, primary olfactory sensations, pathway, Applied.

Unit 10: Central Nervous System

General organization of Nervous System; Structural and Functional divisions and Levels; Synapse; Receptors; Ascending Tracts; Physiology of pain; Internal analgesia system; Sensory Cortex; Thalamus.

Motor system - Organization and different motor components; Spinal cord – Organization for motor functions, Cord reflexes, Spinal shock; Reflexes; Muscle Spindle and Golgi tendon organs; Motor Cortex; Descending Tracts; Upper motor Neuron Lesion , Lower Motor Neuron Lesion.

Brain stem - Role in control of Motor functions, Vestibular apparatus and brainstem nuclei, Maintenance and regulation of tone, posture and equilibrium; Cerebellum and its motor function; Basal Ganglia and its motor functions; Parkinson's disease.

Higher function of the brain - learning, Memory, Language; Limbic system; Hypothalamus; Reticular activating system; Electroencephalogram; Sleep; Cerebral blood Flow and Cerebrospinal fluid.

Medical Biochemistry

1. Biophysical Chemistry

- pH, Buffers Henderson – Hassel Balch equation. Principles and procedures of determination of pH, pO₂, pCO₂ (Blood gas analysis).
- Isotopes-detection and measurement of stable and radioactive isotopes; their application in Medical field.
- Bioenergetics – Free energy change, high-energy linkages, Redox potentials.

2. **Proteins:** Functional roles of proteins in humans. Charge and chemical properties of amino acids and proteins. Amino acid sequence determination, structure of proteins in detail (primary, secondary, tertiary and quaternary).

- Structure of Insulin, Collagen, Hemoglobin and Myoglobin. Methods of study of structure of proteins and different levels of structural organization.
- Peptide bond: Characteristics, Ramachandran plot, Biologically important peptides.
- Conjugated proteins, lipoproteins and glycoproteins, structure of immunoglobulins.

3. Enzymes

- Classification, kinetics, specificity.
- Isoenzymes and coenzymes.
- Active site of enzyme. Methods of locating the functional groups of active sites.
- Mechanism of enzyme action in detail. Enzyme regulations. Mechanism of specific enzymes.
- Immobilized enzymes – application.
- Factors affecting enzyme catalyzed reactions, Michaelis-Menten constant, Lineweaver – Burk plot, Eadie-Hofstee plot.
- Enzyme inhibitions – competitive, non-competitive, uncompetitive and allosteric, mechanism and application. Enzyme poisons
- Diagnostic enzymology
- Therapeutic applications of enzymes
- Enzyme as reagents, immobilized enzymes, -applications
- Enzyme linked immunosorbent assays

4. Introduction to intermediary metabolism, various methods of study of intermediary metabolism with examples. Their advantages and disadvantages.

5. **Biological Oxidation:** electron transport chain, mechanisms of electron transport and oxidative phosphorylation. Regulation of oxidative phosphorylation.

6. **Carbohydrate metabolism:** Carbohydrates of physiological importance. A detailed discussion of the metabolic pathways as it occurs in humans.

7. **Amino acid metabolism:** A detailed study of metabolism of the amino acids in humans and the special compounds formed from amino acids .

8. **Lipid metabolism:** Lipids of physiological importance. Fatty acids – Oxidation of saturated and unsaturated fatty acids, bio-synthesis of fatty acids and triacylglycerols. Ketone body metabolism Biosynthesis and degradation of phospholipids. Role of Phospholipids, biosynthesis and metabolism of Cholesterol. Plasma lipoproteins, role of adipose tissue and liver in fat metabolism. Hyper and hypo lipoproteinemias

9. Integration of metabolic pathways of carbohydrate, protein and lipid. Regulation of metabolic pathways. Metabolism in well fed and starvation state.

10. **Adipose tissue:** White adipose metabolism and Adipokines. Brown adipose tissue metabolism

11. Porphyrins and heme metabolism and associated disorders.

12. Molecular Biology and Genetics

- a. Biological importance of Nucleic acids. Structure of nucleic acids (RNA, DNA and biologically important nucleotides).
- b. Nucleotide metabolism and associated disorders
- c. DNA metabolism
- d. RNA metabolism
- e. Protein biosynthesis
- f. Regulation of gene expressions, Epigenetics
- g. Mutations
- h. Methods of study of base sequence of DNA.
- i. Structure and functions of gene with respect to mammalian genome.
- j. Recombinant DNA technology.
- k. General Principles of blotting techniques and their applications
- l. PCR and its application in Medicine.
- m. Genomic libraries, DNA probes, DNA Microarrays, CRISPR Cas-9, DNA markers, RFLP, DNA fingerprinting
- n. Fluorescent in situ hybridization (FISH)
- o. DNA vaccines
- p. Transgenic animals
- q. Application of molecular techniques in forensic investigation and medico-legal cases
- r. Gene therapy

- s. Overview of human genome project
- t. Pattern of Inheritance and population genetics, risk calculation

13. **Vitamins:** Detailed account of chemistry and biochemical roles of fat soluble and water-soluble vitamins, requirements, source and deficiency symptoms, therapeutic uses and toxicity. Antivitamins.

14. **Minerals:** Classification, sources, absorption, transport, fate, metabolism, biochemical functions, excretion, regulation, RDA, deficiency manifestations of the following: calcium, phosphorous, iron, copper, iodine, zinc, fluoride, magnesium, manganese, selenium, sodium, potassium and chloride.

15. Nutrition

- a. Energy metabolism – B.M.R., R.Q., Energy requirement at different stages, balanced diet. Diet planning in health and disease. SDA of foods
- b. Biological significance of Protein, carbohydrates and fat requirements, RDA, biological values of proteins. .
- c. Malabsorption syndromes, parenteral nutrition.
- d. Modification and Supplementation of dietary requirements in Health and Disease.
- e. Malnutritional disorders: Protein energy malnutrition, Malabsorption syndromes, parenteral nutrition.
- f. Obesity, BMI, causes and consequences of obesity
- g. Metabolic syndrome

16. Specialized tissues

- a. Muscle tissue – composition, mechanism of muscle contraction.
- b. Nerve tissue – composition, transmission of nerve impulse, neurotransmitters: formation and functions
- c. Erythrocytes – composition and metabolism, blood clotting, other blood cells. Phagocytosis.
- d. Connective tissue – composition, chemistry of collagen, elastin and other fibrous proteins.
- e. Bone and teeth – composition. Osteocalcin.
- f. Composition of lens – Biochemical changes during cataractogenesis.
- g. Structure of biomembranes, transport across membranes.

17. Basic concepts in laboratory investigations. Units of measure, reagents, clinical laboratory supplies, basic separation techniques, laboratory calculations, specimen collection and processing, safety in the laboratory, clinical utility of laboratory tests (including sensitivity, specificity, ROC curves, etc), analysis in the laboratory, selection and evaluation of methods (including statistical techniques), evidence-based

laboratory medicine, establishment and use of reference values, pre-analytical variables and biological variations, quality management, clinical laboratory informatics. quality assurance and Quality control, POCT

18. Inborn errors of metabolism involving amino acid, carbohydrate lipid, purine, pyrimidine and porphyrin metabolism, mucopolysaccharidoses.

19. **Diabetes mellitus:** concepts and recent advances

20. Plasma lipoproteins in health and disease, Dyslipidemias, Atherosclerosis, risk factors of CHD

21. Cardiac markers and Laboratory Investigations in Myocardial Infarction

22. Liver function tests, jaundice, hepatic coma.

23. Kidney function tests and interpretations of RFT

24. Pancreatic function tests and Gastric function tests and interpretations.

25. Adrenal Function test and interpretations.

26. **Endocrines** – A detailed account of the synthesis, mechanism of action, chemistry, functions and regulatory role of hormones secreted by pituitary, pancreas, adrenal, thyroid, parathyroid and gonads. Endocrine disorders. Methods of assay and clinical interpretations.

27. Biochemistry of Pregnancy, Amniocentesis and prenatal diagnosis markers

28. **Bone diseases:** Disorders of calcium and phosphorus metabolism, osteoporosis, pagets disease, osteosarcoma, bone markers

29. Biochemical aspects of cancer.

- a. Carcinogens: Physical, chemical and biological
- b. Genetic basis of carcinogenesis: oncogenes, protooncogenes, tumour suppressor genes.
- c. Epigenetic regulation in cancer
- d. Gene expression profiling in cancer
- e. Cancer cell biology: cell cycle abnormalities, telomerase activity, proliferative capacity and decreased apoptosis
- f. Metastasis
- g. Tumor markers

- h. Biochemical basis of cancer chemotherapy and drug resistance
- i. New methods of anti-cancer therapy: targeted cancer therapy, cancer immunotherapy.
- j. Tumour markers.

30. Composition of CSF, alterations in disease.

31. Immunology

- a. Cellular and humoral components of immune system, T & B Lymphocytes, antigen presenting cells
- b. Immunoglobulins – Classes, structural functional relationship
- c. Hybridoma technology
- d. Innate and adaptive immune responses, self/non-self-recognition
- e. Role of T-helper cells in immune response
- f. Concept of Immune tolerance and Autoimmunity
- g. Antigens and concepts in vaccine development – types of vaccines, immunological basis of vaccine development, recombinant DNA technology in vaccine development
- h. Plasma cell disorders - multiple myeloma

32. Regulation of fluid and electrolyte balance and associated disorders

33. Regulation of acid-base balance and associated disorders

34. Hematopoietic disorders

- a. RBC membrane and metabolism
- b. ABO blood group system - biochemical basis, transfusion biology.
- c. Anaemia; types, causes, pathophysiology, morphology & peripheral picture
- d. Hemoglobinopathies

35. Hemostasis and thrombosis: Biochemical mechanisms, related laboratory tests, antiplatelet/anticoagulant/fibrinolytic therapy

36. Stem cells in clinical medicine and research

- a. Basic concepts regarding stem cells
- b. Types of stem cells: embryonic and induced pluripotent stem cells (iPSC)
- c. Potential applications in the clinical medicine
- d. Ethical and legal issues related to use of stem cells in medicine

37. **Biochemical basis of neurodegenerative disorders:** Alzheimer's disease, Parkinsonism, Prions disease, Huntington's disease, multiple sclerosis Myasthenia gravis –pathophysiology, Hereditary myopathies - Duchenne muscular dystrophy

38. **Chromatography:** Principles, procedures and applications of paper, thin layer, ion exchange, gas phase and affinity chromatography. HPLC, gel filtration, GC- MS and its applications.
39. **Electrophoresis:** Principles, procedure and applications of paper, agarose gel, polyacrylamide, capillary, immuno-electrophoresis. Isoelectric focusing.
40. **Spectroscopic analysis of biomolecules:** Photometry, and spectrophotometer: principles and applications, Chemiluminescence / ECLIA - Principles and applications, Nuclear Magnetic Resonance, Mass spectrometry, Flame Photometry: Principle and applications. Fluorometer: Principle and applications
41. **pH meters:** Principles, procedures and application
42. **Centrifugation:** principles and application. Ultra-Centrifugation Techniques: Their applications in the study of lipoproteins.
43. **Radio Immuno Assay:** Competitive binding assay – Principles procedure and applications. Elisa – Principles and applications.
44. **Ion selective electrodes :** Principles, applications in medicine.
45. **Biosensors:** Principles and applications
46. **Cell fractionation :** Isolation and purification of sub cellular particles, biochemical markers of different subcellular organelles.
47. DNA and RNA – isolation and purification
48. Automation in Medical Laboratory Technology and Instrumentation

Medical Microbiology

History of Microbiology

- i. Contributors in Microbiology
- ii. Louis Pasteur
- iii. Robert Koch
- iv. Discovery of important microorganisms
- v. Nobel Laureates in Microbiology

General Microbiology

- i. **Bacterial growth and nutrition:** bacterial growth requirement, bacterial growth curve, factors affecting bacterial growth, bacterial metabolism
- ii. **Sterilization and disinfection:** Definition, Physical methods of sterilization, chemical disinfectants, testing of disinfectants.

Applied Microbiology

Antimicrobial susceptibility testing: Disk diffusion method, dilution test, E test, automated and molecular methods.

Biomedical waste management

- i. Categories of biomedical waste
- ii. Treatment and disposal methods
- iii. Waste segregation in hospitals
- iv. Biomedical waste rules 2016

Immunology

- i. Introduction
- ii. Definition of immunity
- iii. Types of immunity
- iv. Mechanism of innate immunity, active and passive immunity
- v. Local immunity.

Systemic Bacteriology

- i. Isolation & identification of bacteria
- ii. Gram positive cocci of medical importance including Staphylococcus cocci etc.
- iii. Gram negative bacilli of medical importance including Vibrios, Pseudomonas & other non-fermenters,

Virology

- i. General properties of viruses
- ii. Classification of viruses
- iii. Morphology of Virus
- iv. Virus replication
- v. Laboratory diagnosis of viral infections

Mycology

- i. General characteristics & classification of fungi
- ii. Morphology & reproduction of fungi
- iii. Laboratory diagnosis of fungal infections

Parasitology

- i. General characters & classification of parasites
- ii. Methods of identification of parasites
- iii. Stool examination for ova and cyst

Clinical Microbiology

- i. Hospital acquired infections
- ii. Definition
- iii. Sources of infection
- iv. Types of Hospital acquired infections
- v. Prevention of Hospital acquired infections

Community Medicine

Unit 1: Concepts in Public Health

- i. Concept of Disease control strategies.
- ii. Public Health importance of the Health Promotion Approach.
- iii. Concept of Health for All, Millennium development goals.
- iv. Multi-sector approach in Health care programs.
- v. Health Care as part of Community Development Community Participation in health care programs.

Unit 2: Role of Social sciences in Health

- i. Need and Importance and Role of Medico- Social work in Public Health Behavioural sciences. Need and importance of Health - Seeking Behaviour in implementing Health care programs.
- ii. Meaning and relationship of Behavioural Sciences to Health.
- iii. Principles of Social Psychology as applicable to Health.
- iv. Principles of social Anthropology as applicable to Health

Unit 3: Principles and Practice of Information, Education and Communication

- i. Principles of IEC Health Education.
- ii. Objectives of Health Education.
- iii. Content of Health Education.
- iv. Relevance of using Communication Methods in the implementation of Health care.
- v. Meaning of Communication.
- vi. Principles of effective Communication, relevant to health.
- vii. Communication Blocks and means of overcoming the blocks.
- viii. Communication strategies for facilitating effective implementation of Health programs.

- ix. at individual and community levels.
- x. The use and influence of Mass Media for IEC.
- xi. Practice (Methods) of IEC and its application in Community Health.
- xii. Quantitative and Qualitative Evaluation of impact of IEC programs.
- xiii. Population Education.

Unit 4: Maternal and Child Health Care

- i. Meaning and relevance of Risk Approach to Maternal and Child Health.
- ii. Review of the public health relevance of Maternal and Child health physical, mental, social and behavioral problems.
- iii. Rationale, Components and Implementation of Antenatal, Intranatal and Postnatal Care.
- iv. Rationale, Components and Implementation of Child Health Care.
- v. Maternal and Childhood Disease control strategies.
- vi. Indicators of MCH care and their interpretation.
- vii. Child rights, life skill education.

Unit 5: Biostatistics

- i. Collection / Organisation of data / Measurement scales.
- ii. Presentation of data and Record keeping.
- iii. Measures of central tendency.
- iv. Measures of variability.
- v. Sampling and Planning of health survey.
- vi. Probability, Normal distribution and inductive statistics.
- vii. Estimating population values.
- viii. Tests of significance (Parametric / Non-parametric).
- ix. Analysis of variance.
- x. Multi-Variate Analysis and Meta-analysis.
- xi. Association and correlation and Regression.
- xii. Vital Statistics.
- xiii. Evaluation of health and measurement of morbidity / mortality.
- xiv. Life table and its uses, survival analysis.
- xv. Use of computers.
- xvi. Census.
- xvii. Qualitative Research methodologies.
- xviii. Evaluation methodologies.

Unit 6: Principles and Application of Epidemiology.

- i. Principles of Epidemiology.
- ii. Types and detailed methodologies of Epidemiological studies such as Descriptive, Analytical, Experimental and importance of Multi-Centric studies.
- iii. Appropriate choice of epidemiological approach for given situations.
- iv. Interpretation of Epidemiological studies.

- v. Community diagnosis.
- vi. Meta-analysis and systematic review.

Unit 7: Health Information System.

- i. Uses of Health Information System in Health planning including Situational analysis, Prioritization, Monitoring and Evaluation.
- ii. Sources and methods of data acquisition.
- iii. Applications of health information on National and International Notification of Diseases.
- iv. Use of Internet and Intranets including NICNET, etc.
- v. Health Management Information System (HMIS), Mother and Child Tracking system (MCTS).

Medical Pathology

- 1. General Pathology including Immunopathology.
- 2. Hematopathology, Clinical Pathology.
- 3. Cardio vascular system, Respiratory System, Gastro Intestinal System including Liver & Biliary tract, Pancreas, Renal system, Male and Female Genital System and Breast.
- 4. Central and Peripheral Nervous, Endocrine System, Musculo-skeletal System, Reticulo-endothelial System (Lymph nodes, Spleen and Thymus), Dermatopathology and Ophthalmic pathology, Bone, Joints and soft tissues.
- 5. Blood banking, Transfusion Medicine and Immunohematology.
- 6. Cytopathology, Genetic disorders, molecular pathology.
- 7. Quality control, Telepathology, laboratory accreditation, Recent advances
- 8. Autopsy Pathology

Medical Pharmacology

Unit 1: General Pharmacological Principles

1. Introduction, Routes of Drug Administration
2. Pharmacokinetics: Membrane Transport, Absorption and Distribution of Drugs
3. Pharmacokinetics: Metabolism and Excretion of Drugs, Kinetics of Elimination
4. Pharmacodynamics: Mechanism of Drug Action; Receptor Pharmacology
5. Aspects of Pharmacotherapy, Clinical Pharmacology and Drug Development
6. Adverse Drug Effects

Unit 2: Drugs Acting on Autonomic Nervous System

1. Autonomic Nervous System: General Considerations
2. Cholinergic System and Drugs
3. Anticholinergic Drugs and Drugs Acting on Autonomic Ganglia
4. Adrenergic System and Agonists
5. Antiadrenergic Drugs (Adrenergic Receptor Antagonists)
6. Drugs for Glaucoma

Unit 3: Autacoids and Related Drugs

1. Histamine and Antihistaminic drugs
2. 5-Hydroxytryptamine, its Antagonists and Drug Therapy of Migraine
3. Prostaglandins, Leukotrienes (Eicosanoids) and Platelet Activating Factor
4. Nonsteroidal Anti-inflammatory Drugs and Antipyretic-Analgesics
5. Antirheumatoid drugs
6. Antigout Drugs

Unit 4 Respiratory System Drugs

1. Drugs for Cough and
2. Drugs for Bronchial Asthma

Unit 5: Hormones and Related Drugs

1. Introduction
2. Anterior Pituitary Hormones
3. Thyroid Hormone and Thyroid Inhibitors
4. Insulin, Oral Hypoglycemic Drugs and Glucagon
5. Corticosteroids
6. Androgens and Drugs for Erectile Dysfunction
7. Estrogens, Progestins and Contraceptives
8. Oxytocin and Other Drugs Acting on Uterus
9. Drugs Affecting Calcium Balance

Unit 6: Drugs Acting on Peripheral (Somatic) Nervous System

1. Skeletal Muscle Relaxants
2. Local Anesthetics

Unit 7: Drugs Acting on Central Nervous System

1. General Anesthetics
2. Ethyl and Methyl Alcohols
3. Sedative-Hypnotics
4. Antiepileptic Drugs
5. Antiparkinsonian Drugs
6. Drugs Used in Mental Illness: Antipsychotic and Antimanic Drugs
7. Drugs Used in Mental Illness: Antidepressant and Antianxiety Drugs
8. Opioid Analgesics and Antagonists
9. CNS Stimulants and Cognition Enhancers

Unit 8: Cardiovascular Drugs

1. Cardiac Electrophysiological Considerations
2. Drugs Affecting Renin-Angiotensin System and Plasma Kinins
3. Cardiac Glycosides and Drugs for Heart Failure
4. Antiarrhythmic Drugs
5. Antianginal and Other Anti-ischaemic Drugs
6. Antihypertensive Drugs

Unit 9: Drugs Acting on Kidney

1. Relevant Physiology of Urine Formation
2. Diuretics
3. Antidiuretics

Unit 10: Drugs Affecting Blood and Blood Formation

1. Haematinics and Erythropoietin
2. Drugs Affecting Coagulation, Bleeding and Thrombosis
3. Hypolipidaemic Drugs and Plasma Expanders

Unit 11: Gastrointestinal Drugs

1. Drugs for Peptic Ulcer and Gastroesophageal Reflux Disease
2. Antiemetic, Prokinetic and Digestant Drugs
3. Drugs for Constipation and Diarrhoea

Unit 12: Antimicrobial Drugs

1. Antimicrobial Drugs: General Considerations
2. Sulfonamides, Cotrimoxazole and Quinolones
3. Beta-Lactam Antibiotics
4. Tetracyclines and Chloramphenicol (Broad-Spectrum Antibiotics)
5. Aminoglycoside Antibiotics

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

6. Macrolide, Lincosamide, Glycopeptide and Other Antibacterial Antibiotics; Urinary Antiseptics
7. Antitubercular Drugs
8. Antileprotic Drugs
9. Antifungal Drugs
10. Antiviral Drugs
11. Antimalarial Drugs
12. Antiamoebic and Other Antiprotozoal Drugs
13. Anthelmintic Drugs

Unit 13: Chemotherapy of Neoplastic Diseases

1. Anticancer Drugs

Unit 14: Miscellaneous Drugs

1. Immunosuppressant Drugs
2. Drugs Acting on Skin and Mucous Membranes
3. Antiseptics, Disinfectants and Ectoparasitocides
4. Chelating Agents
5. Vitamins
6. Vaccines and Sera
7. Drug Interactions

Forensic Medicine & Toxicology

1. Basic medical sciences namely Anatomy, Physiology, Pharmacology, Pathology and Microbiology as applied to Forensic Medicine
2. Outlines of analytical and histopathological techniques as applied to forensic medicine.
3. Injuries and Thermal deaths from cold, heat, electricity, lightning and radiation.
4. Death from starvation.
5. Mechanical injuries & their medico-legal aspects in relation to nature of injuries, accidental, suicidal, homicidal, and distinction between injuries caused during life and after death. Medico-legal examination of an injured person. Regional and Transportation injuries.
6. Examination of weapon in relation to inflicted injuries.
7. Firearm injuries.
8. Causes of death from wounds.
9. Forensic radiology in identification, pathology, dentistry, child abuse, trauma, medico-legal implications of radiological procedures.

10. Forensic psychiatry: Various Acts in relation to Forensic psychiatry, Classification of mental disorders and abnormal human behaviors. Medico-legal aspects of insanity and abnormal human behavior as regards to civil & criminal responsibilities and rules regarding admission, treatment and discharge of mentally ill person in the Mental Hospitals. Feigned insanity, Juvenile delinquency in the juvenile court. Restraint of mentally ill person.
11. Biology of behavior, emotion, stress, attitudes, normal & abnormal personalities.
12. Psychological assessment & testing personality and its disorders, abnormal psychology, health psychology, assessment strategies in medical education.
13. Study of suicide, production of personality and circumstances. Post-mortem analysis of suicide notes and its circumstances.
14. Counselling in normal sexual behavior and sex related disorders.
15. Medico-legal aspects of emergency, resuscitation in intensive care
16. Trauma, Work Stress & Disease. Torture medicine: Medico-legal aspects & duties of physician in cases of torture.
17. Mass disasters.
18. Bombs and other explosives. Biological and chemical warfare and barotrauma.
19. Impotence, Sterility, Artificial insemination, sterilization. Test tube babies & their medico-legal aspects.
20. HIV and AIDS.
21. Virginity, Pregnancy, Delivery in relation to suit of nullity of marriage, divorce, and legitimacy affiliation cases etc.
22. Abortion – Criminal & Justifiable, Laws in relation to criminal abortion. Duties of medical persons when called to treat a case of criminal abortion. MTP Act 1971.
23. Sexual Offences – Rape, Incest, unnatural sexual offences, such as sodomy, Tribadism, Bestiality & Buccal Coitus, Sexual perversions.
24. Infanticide.
25. Forensic Toxicology & Medical Jurisprudence
26. General & Forensic Toxicology including Classification, Mechanism of Action, Clinical Features, Diagnosis, Management, Autopsy appearances & Medico-legal Importance of Poisons.
27. Addiction, de-addictions and drug abuse.
28. Important Toxicological Analytical Techniques.

29. Forensic Science: Recent Advances & Modern Trends.
30. Introduction & working of various Wings of Forensic Science Laboratory - Immunology, Examination of biological trace material evidence, ballistics, Crime Laboratory, Forensic Photography.
31. Definition of Medical Jurisprudence.
32. Introductory remarks, Criminal Courts & their powers, inquests and legal procedures, procedure in court, medical evidence, various medical certificates, medico legal reports, dying declaration & dying deposition, witness, conducts and duties of the doctor in the witness box, professional secrecy.
33. Regulation of medical profession, various governing bodies, their constitution & functions. Laws in relation to medical man.
34. Rights, duties & privileges of a registered medical practitioner.
35. Informed consent in medical practice. Infamous conduct. Medical malpraxis.
36. Physician duties under various public health & medical Acts.
37. Problems of privileges and confidentiality etc. Physician in the Witness Box.
38. Liabilities of Hospitals, nursing home and public dispensaries to patients.
39. Medical practice in relation to Insurance.
40. Relevant parts of Indian Penal Code, Criminal procedure, Indian Evidence Act, Immoral Trafficking Act, Workman's Compensation Act and other Laws related to medical practice.
41. Law & Procedures related to Organ Transplantation.
42. Legal & Ethical aspects of Family planning procedures.
43. Therapeutic trial & human experimentation etc.
44. Medico-legal aspects of Organ & Tissue transplantation.
45. Euthanasia.
46. Supreme Court and High Court Landmark judgments related to Forensic Medicine and Medical Jurisprudence
47. Relevant Laws, Legal Procedures, Psychiatry & Medical Jurisprudence including MCI, Ethics & Bio-Medical Research, Consent, Negligence, Evidence & Recording of Evidence ,
48. Relevant Sections of IPC, Cr Pc, IEA, Acts - CPA, MTP, PNDDT, NDPS, OT , NHRC
49. Medical certification of cause of death and relevant vital statistics.

50. Day-to-day MLC problems in hospitals.
51. Recent laws applicable to medical man.
52. Value of medical opinion in the court of law.
53. Forensic Pathology including Forensic immunology & recent advances
54. Medicolegal autopsy of dead body, decomposed and mutilated body or its fragments / skeleton, bones, exhumation & rules regarding it.
55. Death, manner of death, modes of death, cause of death, sudden death, signs of death and changes following death. Estimation of post-mortem interval, Forensic Entomology, Post-mortem chemistry of body fluid like blood, CSF and vitreous humor, presumption of death and presumption of survivorship.
56. Violent asphyxial deaths: Hanging, Strangulation, Suffocation and Drowning.
57. Death from sudden violence, suspicious, unknown and unnatural cause, disease following trauma.
58. Basic concepts of immunology and serology.
59. Principles of various immuno-serological tests, precipitin test, pregnancy test, sperm antibody test.
60. Role of immunological techniques in crime investigation and exclusion of parentage.
61. Incompatibility and adverse reaction of drugs commonly used in therapy etc.
62. Anaphylaxis and hypersensitivity reactions.
63. Different types of teaching aids, methods of teaching & question paper formation of different types (MCQs, Structured, Short, and Essay types).
64. DNA & Fingerprint system, Lie Detector & Polygraph, Narco-analysis.
65. National Health policies.
66. Lifesaving manoeuvres and pre-hospital first aid.
67. Routine and advanced Imaging Techniques and equipment.
68. Medico-legal record keeping.
69. Basics of medical education technology and research methodology.
70. Computer and its use and its applicability in the specialty.
71. Medical auditing.

Radio-Diagnosis

Management and Planning of radiology department with compliance to national & international guidelines

- Regulatory Bodies & regulatory Requirements: International Commission on Radiation Protection (ICRP) / National Regulatory body (AERB - Atomic Energy Regulatory Board) - Responsibilities, organization, Safety Standard, Codes and Guides, Responsibilities of licenses, registrants & employers and Enforcement of Regulatory requirements. (ICRP, NRPB, NCRP and WHO guidelines for radiation protection, pregnancy and radiation protection).
- Personal monitoring and occupational exposures: Personal monitoring for Radiation workers. Monitoring devices. Body badges and ring badges. Thermo-luminescent dosimeters, Pocket ionization chambers. Applications, advantages and limitations of each device, Values for dose equivalent limits for occupational radiation exposures.
- Radiation safety and radiation protection

Modern Imaging techniques including Fusion and Hybrid imaging technologies

- Angiography, venography and cardiac catheterization procedures
- CT, MRI, Ultrasound – Technique, protocol and acquisition techniques
- Techniques of Fusion and Hybrid imaging technology including PET CT, PET MRI, PET ULTRASOUND, MRI, CT, FLUOROSCOPY, Hybrid imaging as well as advanced interventional suite

Advances Physics of Radiology and Imaging

- CR, DR, CT, MRI and ultrasonography

Modern Radiological and Imaging equipment

- CT, MRI, Ultrasonography, Fluoroscopy and IITV

Radiological imaging procedures

- Barium studies including single and double contrast, enteroclysis, Sialography, Intravenous cholangiography, PTC, T-tube cholangiogram including MRI special techniques
- IVP, RGU, MCU, Cystography
- Breast imaging techniques - Mammography basic views, Wire localization, Biopsy procedures
- HSG, Sinography and Fistulogram, Arthrography

Quality Assurance and quality control in Diagnostic Radiology and Imaging

Intervention Radiological Techniques and Care of Patient

Newer development in Advanced Imaging technology

Clinical Psychology

1. Introduction to Psychology

Brief history of Psychology with recent development and special reference to Psychology in India, Schools of psychology, Methods of Psychology.

Sensation, Attention, Perception, Motivation, Emotion, Learning and Memory

Reasoning, Concept formation, Creativity, Intelligence, Problem solving, Thinking and Language. Personality.

2. Abnormal Psychology

Nature and definition of abnormal psychology, historical biography, Indian concept of mental disorders, Criteria- statistical, personal discomfort and social.

Anxiety spectrum disorders, PTSD, Mood Disorder, Schizophrenia, Delusional disorder, BPAD and Adjustment Disorder.

3. Social Psychology

Nature-Causes of Social Behavior.

Social Cognition, Social Perception, Attribution, Impression formation & Management, Self

presentation & knowledge, Social Comparison. Social Influence.

Attitudes, Cognitive dissonance, Prejudice.

Interpersonal Attraction, Prosocial behavior,

Crowd funding, Aggression, Bullying; the prevention and control.

4. Introduction to Clinical Psychology

Definition, scope & Evolution of Clinical Psychology, Concepts of Mental Health & Illness: Models of Normality & Abnormality.

Diagnosis and Classification Issues: ICD-10, ICD -11, DSM-IV TR & DSM 5.

Code of conduct, Types of Clinical Interviews, Importance of Rapport & Relating with clients, Communication Strategies, Diagnostic Interviewing & Case management, Evidence based model of clinical psychology practice & Clinical Judgement.

Evolution of Clinical Psychology in India, Contributions by eminent psychologists, Clinical Psychology Training and Practice in India, Cultural, legal & ethical issues in clinical psychology, Recent Developments & Future Directions in Clinical Psychology

9. Hunsley, J, & Lee, C.M. (2010) *Introduction to Clinical Psychology – An evidence Based Approach*, John Wiley & Sons. Inc. USA

Medical Education

Unit 1: Foundations & Principles of Medical Education

- Concept, scope and historical evolution of medical education; major reforms
- Goals and roles of the medical teacher – facilitator, assessor, role model, mentor
- Competency-Based Medical Education (CBME): competencies, milestones and Entrustable Professional Activities (EPAs)
- Regulatory framework and national guidelines governing medical education

Unit 2: Learning Theories & Educational Psychology

- Principles of adult learning (andragogy) and self-directed learning
- Learning theories: behaviourism, cognitivism, constructivism, social and experiential learning
- Learning styles, motivation and the learning environment
- Deep versus surface learning; reflective practice and metacognition

Unit 3: Curriculum Planning & Development

- Models of curriculum design; Kern's six-step approach
- Needs assessment; writing goals, competencies and objectives across cognitive, psychomotor and affective domains
- Horizontal and vertical integration; spiral curriculum; constructive alignment
- Hidden, informal and null curriculum; curriculum mapping and evaluation

Unit 4: Teaching–Learning Methods

- Large-group teaching and the interactive lecture
- Small-group methods: tutorials, seminars, problem-based and case-based learning
- Experiential and workplace learning; bedside and clinical teaching; skills laboratory
- Self-directed, blended and flipped-classroom approaches

Unit 5: Assessment & Evaluation

- Purposes and principles of assessment; utility (validity, reliability, feasibility, acceptability, educational impact)
- Miller's pyramid; assessment of knowledge, skills and competence
- Tools: MCQs, short-answer questions, OSCE/OSPE and workplace-based assessment (mini-CEX, DOPS, log book, portfolio)
- Blueprinting, item analysis, standard setting; formative versus summative assessment; feedback

Unit 6: Educational Technology & Simulation

- Principles of instructional design
- e-Learning, learning management systems, virtual and augmented reality
- Simulation-based education; fidelity and debriefing
- Use of artificial intelligence and digital tools in teaching and assessment

Unit 7: Professionalism, Ethics & Communication

- Professional identity formation; attitude, ethics and communication (AETCOM)
- Teaching and assessing professionalism and medical ethics
- Communication, counselling and interprofessional education
- Remediation of professionalism lapses

Unit 8: Faculty Development & Educational Leadership

- Faculty development programmes and teacher training
- Mentoring and academic supervision
- Educational leadership, management and change
- Scholarship of teaching and learning

Unit 9: Programme Evaluation & Quality Assurance

- Models of programme evaluation (Kirkpatrick, CIPP, logic models)
- Accreditation and quality standards in medical education
- Institutional appraisal and continuous quality improvement

Unit 10: Research in Health Professions Education

- Educational research paradigms: quantitative, qualitative and mixed methods
- Framing research questions and selecting study designs in education
- Data collection, analysis and ethics in educational research
- Writing, dissemination and publication of educational research

Reference Books / Resources

- Kern's Curriculum Development for Medical Education (Thomas, Kern et al.)
- Understanding Medical Education – Theory and Practice (Swanwick et al.)

- A Practical Guide for Medical Teachers (Dent, Harden & Hunt)
- National Competency-Based Medical Education curriculum documents and guidelines
- Journals: Medical Education; Academic Medicine; Medical Teacher

Nephrology

Unit 1: Renal Anatomy, Physiology & Pathophysiology

- Structural and functional anatomy of the kidney and nephron
- Glomerular filtration and renal hemodynamics
- Tubular transport; concentration and dilution of urine
- Renal regulation of water, electrolytes and acid-base balance; renal endocrine functions

Unit 2: Fluid, Electrolyte & Acid–Base Disorders

- Disorders of water and sodium balance (hyponatremia and hypernatremia)
- Disorders of potassium, calcium, phosphate and magnesium
- Metabolic and respiratory acidosis and alkalosis
- Approach to mixed acid-base disorders

Unit 3: Clinical Evaluation & Investigations

- History, examination and syndromic approach in nephrology
- Urinalysis and urine microscopy; evaluation of proteinuria and hematuria
- Assessment of glomerular filtration rate and renal function; biomarkers
- Renal imaging; renal biopsy – indications, technique and interpretation

Unit 4: Glomerular Diseases

- Approach to nephrotic and nephritic syndromes
- Primary glomerulonephritides: minimal change, FSGS, membranous, IgA and MPGN
- Rapidly progressive glomerulonephritis and the vasculitides
- Secondary glomerular disease: lupus nephritis, diabetic kidney disease, amyloidosis

Unit 5: Tubulointerstitial, Cystic & Hereditary Diseases

- Acute and chronic tubulointerstitial nephritis
- Renal tubular acidosis and inherited tubular disorders
- Autosomal dominant polycystic kidney disease and other cystic diseases
- Hereditary nephropathies: Alport syndrome and Fabry disease

Unit 6: Acute Kidney Injury

- Definition, classification, staging and epidemiology
- Etiology and pathophysiology: pre-renal, intrinsic and post-renal
- Prevention, diagnosis and management
- Renal replacement therapy in AKI; contrast-associated and drug-induced injury

Unit 7: Chronic Kidney Disease

- Definition, staging, etiology and mechanisms of progression
- Complications: CKD–mineral and bone disorder, anemia and cardiovascular disease
- Nutritional, metabolic and endocrine complications

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

- Conservative and preventive management; preparation for renal replacement therapy

Unit 8: Dialysis Therapies

- Principles of dialysis; solute and fluid removal
- Hemodialysis: prescription, vascular access, adequacy and complications
- Peritoneal dialysis: techniques, adequacy and peritonitis
- Continuous renal replacement therapy and other extracorporeal therapies

Unit 9: Renal Transplantation

- Transplant immunology and immunogenetics
- Donor and recipient evaluation; organ allocation and legal aspects
- Immunosuppression; acute and chronic rejection
- Post-transplant infections, malignancy, medical complications and recurrent disease

Unit 10: Hypertension & Vascular Disorders of the Kidney

- Pathophysiology, evaluation and management of hypertension
- Secondary and resistant hypertension; renovascular disease
- Thrombotic microangiopathies (HUS / TTP)
- Renal involvement in systemic vascular disease

Unit 11: Systemic Diseases, Special Situations & Pharmacology

- Diabetes, paraproteinemias (multiple myeloma) and the kidney
- Kidney disease in pregnancy; hepatorenal and cardiorenal syndromes
- Onco-nephrology, geriatric nephrology and critical care nephrology
- Drug dosing in kidney disease and nephrotoxins; genetics and recent advances

Reference Books / Resources

- Brenner and Rector's The Kidney
- Comprehensive Clinical Nephrology (Johnson, Feehally, Floege)
- Oxford Textbook of Clinical Nephrology
- Handbook of Dialysis (Daugirdas); KDIGO clinical practice guidelines
- Journals: Kidney International; Journal of the American Society of Nephrology

Pediatrics

Unit 1: Growth, Development & Behaviour

- Normal growth: patterns, assessment and growth charts (IAP / WHO); short stature and obesity
- Normal development and milestones; developmental assessment and delay
- Adolescent growth and puberty; disorders of puberty
- Developmental-behavioural disorders: ADHD, autism spectrum disorder, learning disability

Unit 2: Nutrition

- Infant and young child feeding; breastfeeding and complementary feeding
- Protein-energy malnutrition and management of severe acute malnutrition
- Micronutrient deficiencies: vitamin A and D, iron, iodine, zinc

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

- Nutritional requirements; enteral and parenteral nutrition; national nutrition programmes

Unit 3: Neonatology

- Care of the normal newborn and neonatal resuscitation
- Low birth weight and prematurity; thermoregulation and feeding of the LBW infant
- Neonatal jaundice, sepsis, respiratory distress and perinatal asphyxia (HIE)
- Neonatal metabolic problems; retinopathy of prematurity; newborn screening

Unit 4: Infectious Diseases & Immunization

- Common bacterial, viral and fungal infections of childhood
- Tuberculosis and HIV in children
- Tropical and vector-borne infections: dengue, malaria, enteric fever
- National Immunization Schedule / Universal Immunization Programme and vaccinology

Unit 5: Respiratory System

- Upper and lower respiratory tract infections; pneumonia and bronchiolitis
- Bronchial asthma and wheezing disorders
- Respiratory tuberculosis
- Congenital and chronic lung disorders; foreign-body aspiration

Unit 6: Cardiovascular System

- Congenital heart disease: cyanotic and acyanotic lesions
- Acute rheumatic fever and rheumatic heart disease
- Heart failure, arrhythmias and infective endocarditis
- Systemic hypertension in children

Unit 7: Gastrointestinal & Hepatobiliary System

- Acute and persistent diarrhoea; dehydration and fluid therapy
- Malabsorption syndromes and celiac disease
- Liver disorders: hepatitis, cholestasis and chronic liver disease
- Gastrointestinal bleeding; recurrent abdominal pain; common surgical conditions

Unit 8: Nephrology & Genitourinary System

- Urinary tract infection and vesicoureteric reflux
- Nephrotic syndrome and acute glomerulonephritis
- Acute kidney injury and chronic kidney disease
- Renal tubular disorders; childhood hypertension; enuresis

Unit 9: Neurology

- Seizure disorders and epilepsy; febrile seizures
- Central nervous system infections: meningitis and encephalitis
- Cerebral palsy and neurodevelopmental disability
- Neuromuscular disorders; neurocutaneous syndromes; coma and raised intracranial pressure

Unit 10: Hematology, Oncology & Genetics

- Anemias: nutritional, hemolytic, thalassemia and sickle cell disease
- Bleeding and coagulation disorders

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

- Childhood malignancies: leukemia, lymphoma and common solid tumours
- Chromosomal disorders, inborn errors of metabolism and genetic counselling

Unit 11: Endocrinology & Metabolism

- Diabetes mellitus and diabetic ketoacidosis
- Thyroid disorders and disorders of growth
- Adrenal and pituitary disorders; disorders of sexual differentiation
- Disorders of calcium and bone metabolism

Unit 12: Pediatric Emergencies, Critical Care & Community Pediatrics

- Pediatric emergencies and advanced life support; shock and poisoning
- Fluid, electrolyte and acid-base disorders; intensive care
- Rheumatological and immunological disorders
- Community and social pediatrics; IMNCI; national child health programmes (RBSK, RMNCH+A); child rights

Reference Books / Resources

- Ghai Essential Pediatrics
- IAP Textbook of Pediatrics
- Cloherty and Stark's Manual of Neonatal Care
- Journals: Indian Pediatrics; Pediatrics

Otorhinolaryngology

Unit 1 : Otology

- Inflammatory Middle Ear Disease
- Conductive Hearing Restoration

Unit 2 : Neurotology & Lateral Skull Base

- Vestibular Neurophysiology, diseases and management
- Cerebellopontine Angle Tumors

Unit 3 : Rhinology & Allergy

- Inflammatory Sinus Disease
- Anterior Skull Base diseases and Surgery

Unit 4 : Laryngology & Voice

- Voice disorders, evaluation and management including Phonosurgery
- Complex Airway Management

Unit 5 : Head and Neck Surgical Oncology

- Malignancies of Head and neck including management
- Thyroid and Salivary Gland Pathology

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

Unit 6 : Pediatric Otolaryngology

- Congenital ENT Anomalies and management
- Childhood Infectious Diseases

Unit 7 : Facial Plastic and Reconstructive Surgery

- Maxillofacial Trauma
- Microvascular Reconstruction

Unit 8 : Sleep Medicine and Surgery

- Snoring, OSAS and management including Palatopharyngeal Surgery
- Targeted Neuromodulation

Unit 9 : Bronchoesophagology and Dysphagia

- Swallowing Disorders
- Esophageal disorders

Unit 10 : Endocrine Head and Neck Surgery

- Thyroid Neoplasms and management
- Parathyroid Neoplasms and management

Reference Books / Resources

Stell & Maran's Textbook of Head and Neck Surgery and Oncology (Watkinson & Clarke)

Operative Otolaryngology: Head and Neck Surgery, edited by Dr. Eugene N. Myers

Essentials of Endoscopic Sinus Surgery (1993), by Heinz Stammberger and Michael Hawke.

Critical Care Medicine

Unit 1 : Foundations of Critical Care Medicine

- Principles of critical care medicine; ICU organization, admission, triage and discharge; Severity of illness; APACHE, SOFA and other scoring systems
- Monitoring of critically ill patients; physiological monitoring and early warning systems; Organ dysfunction and multiple organ dysfunction syndrome

Unit 2 : Respiratory Failure and Mechanical Ventilation

- Acute hypoxemic and hypercapnic respiratory failure; acute respiratory distress syndrome (ARDS); Oxygen therapy, high-flow nasal oxygen, non-invasive and invasive mechanical ventilation

- Lung-protective ventilation, PEEP, recruitment, driving pressure and mechanical power; Weaning, spontaneous breathing trials, extubation and ventilator-associated complications

Unit 3 : Sepsis, Septic Shock and Critical Care Infection

- Sepsis and septic shock: definitions, pathophysiology, recognition and management principles; Hemodynamic resuscitation, fluids, vasopressors and perfusion assessment
- Antimicrobial therapy, source control, antimicrobial stewardship and resistance; ICU-acquired infections, infection prevention and sepsis biomarkers

Unit 4 : Shock and Hemodynamic Management

- Hypovolemic, distributive, cardiogenic and obstructive shock; Hemodynamic monitoring; preload, afterload, cardiac output and tissue perfusion
- Fluid responsiveness, fluid tolerance, dynamic indices and fluid management; Vasopressors, inotropes and echocardiography in shock

Unit 5 : Acute Kidney Injury and Extracorporeal Organ Support

- Acute kidney injury: definition, classification, prevention and management; Fluid overload, renal recovery and kidney injury biomarkers
- Renal replacement therapy: indications, modalities, dose and anticoagulation; Continuous renal replacement therapy, extracorporeal membrane oxygenation and other extracorporeal organ support

Unit 6 : Cardiovascular and Neurocritical Care

- Acute coronary syndromes, acute heart failure and cardiogenic shock in the ICU; Arrhythmias, cardiac arrest and post-cardiac arrest care
- Traumatic brain injury, intracranial hypertension and neurocritical monitoring; Stroke, status epilepticus and neurological prognostication

Unit 7 : Critical Care Pharmacology, Sedation, Delirium and Analgesia

- Pharmacokinetics and pharmacodynamics in critical illness; Sedation, analgesia, neuromuscular blockade and withdrawal
- Delirium: assessment, prevention and management; Antimicrobial, vasoactive, anticoagulant and other commonly used ICU drugs

Unit 8 : Nutrition, Metabolism and Special Critical Care

- Nutritional assessment; enteral and parenteral nutrition; Metabolic disturbances; glucose, electrolyte and acid–base disorders
- Obstetric, paediatric, geriatric and immunocompromised critical care; Toxicology, environmental emergencies and disaster critical care

Unit 9 : Procedures, Point-of-Care Ultrasound and Advanced Monitoring

- Airway management, vascular access, chest tube insertion and tracheostomy; Point-of-care ultrasound: lung, cardiac, vascular and abdominal applications
- Critical care echocardiography and ultrasound-guided procedures; Advanced monitoring: invasive pressures, cardiac output and neurological monitoring

Unit 10 : Critical Care Outcomes, Quality Improvement and Emerging Research Areas

- ICU outcomes: mortality, morbidity, length of stay, readmission and long-term outcomes; Post-intensive care syndrome, rehabilitation, survivorship and quality of life
- Patient safety, quality improvement, human factors and ICU performance indicators; Precision critical care, biomarkers, artificial intelligence, machine learning, digital health and predictive analytics

Anaesthesiology

Unit 1 : Airway and respiratory research

- Difficult airway research
- Mechanical ventilation
- Lung-protective ventilation
- Ultrasound-guided airway and respiratory assessment
- Perioperative respiratory outcomes

Unit 2 : Neuroanesthesia

- Cerebral monitoring
- Neuroprotection
- Intracranial pressure
- Neurological outcomes

Unit 3 : Pain Medicine

- Acute and chronic pain
- Regional anesthesia
- Ultrasound-guided nerve blocks
- Opioid-sparing strategies
- Multimodal analgesia

Unit 4 : Emerging research areas

- Artificial intelligence and machine learning
- Digital health
- Wearable monitoring
- Point-of-care ultrasound
- Remote monitoring
- Closed-loop anesthesia systems
- Simulation-based research

Unit 5 : Cardiovascular anesthesia

- Hemodynamic monitoring
- Goal-directed therapy
- Cardiopulmonary bypass research
- Perioperative myocardial injury

Unit 6 : Special ethical issues in anesthesiology research

- Consent in emergency anesthesia research
- Research in ICU patients
- Sedated/intubated patients
- Vulnerable perioperative populations

- Use of experimental anesthetic techniques
- Safety monitoring

Faculty of Pharmacy

Pharmaceutical Chemistry

1. Basic Aspects of Organic Chemistry.

Organic intermediates: Carbocations, carbanions, free radicals, carbenes and nitrenes their method of formation, stability and synthetic applications. Detailed knowledge regarding the reactions, mechanisms and their relative reactivity and orientations. Nucleophilic uni- and bimolecular reactions (SN1 and SN2), Elimination reactions (E1 & E2), Hoffman & Saytzeff's rule, Rearrangement reaction.

2. Stereochemistry & Asymmetric Synthesis.

Basic concepts in stereochemistry: optical activity, specific rotation, racemates and resolution of racemates, the Cahn, Ingold, Prelog (CIP) sequence rule, meso compounds, pseudo asymmetric centres, axes of symmetry, Fischers D and L notation, cis-trans isomerism, E and Z notation. Methods of asymmetric synthesis using chiral pool, chiral auxiliaries and catalytic asymmetric synthesis, enantiopure separation and Stereo selective synthesis with examples

3. Study of mechanism and synthetic applications of following named reactions.

Sandmeyer Reaction, Mitsunobu reaction, Mannich reaction, Vilsmeier-Haack Reaction, Sharpless asymmetric epoxidation, Baeyer-Villiger oxidation, Shapiro & Suzuki reaction, Ozonolysis and Michael addition reaction.

4. Synthetic Reagents & Applications

Aluminiumisopropoxide, N-bromosuccinamide, diazomethane, dicyclohexylcarbodiimide, Wilkinson reagent, Wittig reagent. Osmium tetroxide, titanium chloride, diazopropane, diethyl azodicarboxylate, Triphenylphosphine, Benzotriazol-1-yloxy) tris (dimethylamino) phosphonium hexafluoro-phosphate.

5. Heterocyclic Chemistry

Mechanism and application involved in synthesis of drugs containing five, six membered and fused heterocyclics such as Debus-Radziszewski imidazole synthesis, Knorr Pyrazole Synthesis Pinner Pyrimidine Synthesis, Combes Quinoline Synthesis, Bernthsen Acridine Synthesis, Smiles rearrangement and Traube purine synthesis

6. Green Chemistry.

Pericyclic reactions, Microwave assisted reactions: Merit and demerits of its use, increased reaction rates, mechanism, superheating effects of microwave, effects

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

of solvents in microwave assisted synthesis, microwave technology in process optimization, its applications in various organic reactions and heterocycles synthesis. Catalysis: Types of catalysis, heterogeneous and homogeneous catalysis, advantages and disadvantages.

7. Characterization of Compounds.

Structural Characterization of compounds using IR, ¹HNMR, ¹³CNMR and MS Spectroscopy.

8. Drug discovery.

Stages of drug discovery, lead discovery; identification, validation and diversity of drug targets. Biological drug targets: Receptors, types, binding and activation, theories of drug receptor interaction, drug receptor interactions, agonist's vs antagonists, and artificial enzymes. Rational Design of Enzyme Inhibitors Enzyme kinetics & Principles of Enzyme inhibitors, Enzyme inhibitors in basic research, rational design of non-covalently and covalently binding enzyme inhibitors.

9. Introduction to Computer Aided Drug Design.

History, different techniques and applications. Quantitative Structure Activity Relationships: Basics History and development of QSAR and its application Applications, Molecular Properties and Drug Design, Pharmacophore Mapping and Virtual Screening.

Pharmaceutics

1. Preformulation Studies.

Study of physicochemical characteristics of drug substances, BCS classification of drugs & its significance.

2. Optimization techniques in Pharmaceutical Formulation.

Concept and parameters of optimization, Optimization techniques in pharmaceutical formulation and processing.

3. Formulation and manufacturing considerations and quality control tests of different dosage forms (solid dosage forms, liquid dosage forms, semi-solid dosage forms).

4. Additives of formulation, types, examples, advantages, disadvantages, drug excipient interaction, incompatibility, various types of incompatibilities.

5. Drug stability: Reaction kinetics: zero, pseudo-zero, first & second order, units

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

of basic rate constants, determination of reaction order. Accelerated stability studies. ICH guidelines.

6. **Drug delivery systems (DDS):** NDDS models, osmotic pumps, various release patterns eg. Controlled release, delayed release. Sustained release etc., order of release. Oral controlled DDS, factors affecting controlled release.
7. **Carriers in DDS:** polymers and their classification, types, carbohydrates, surfactants, proteins, lipids, prodrugs etc.
8. **Transdermal drug delivery systems (TDDS):** principles, absorption enhancers, evaluation of TDDS.
9. **Drug targeting:** microspheres, nano particles, liposomes, monoclonal antibodies, etc.
10. **Drug Absorption, Distribution, Biotransformation, and elimination.** Protein binding, Bioavailability, factors influencing bioavailability, evaluation of bioavailability, bio-equivalence. Methods to improve bioavailability.

Pharmacy Practice

1. **Introduction to Clinical Pharmacy:** Definition, evolution and scope of clinical pharmacy, International and national scenario of clinical pharmacy practice, Pharmaceutical care. Ward round participation, Drug therapy review (Drug therapy monitoring including medication order review, chart endorsement, clinical review and pharmacist interventions).
2. **Clinical Pharmacy Services:** Patient medication history interview, Basic concept of medicine and poison information services, Basic concept of pharmacovigilance, Hemovigilance, Materiovigilance and AEFI, Patient medication counselling, Drug utilisation evaluation, Documentation of clinical pharmacy services, Quality assurance of clinical pharmacy services.
3. **Patient Data & Practice Skills:** Patient's case history - its structure and significances in drug therapy management, common medical abbreviations and

terminologies used in clinical practice, communication skills: verbal and non- verbal communications, its applications in patient care services.

4. **Lab Data Interpretation:** Haematological tests, Renal function tests, Liver function tests, Tests associated with cardiac disorders, Pulmonary function tests, Thyroid function tests, Fluid and electrolyte balance, Microbiological culture sensitivity tests.
5. **Medicines & Poison Information Services**
Medicine Information Service: Definition and need for medicine information service, Medicine information resources, Systematic approach in answering medicine information queries, Preparation of verbal and written response, Establishing a drug information centre.
Poison Information Service: Definition, need, organization and functions of poison information centre.
6. **Health Promotion:** Definition and health promotion activities, family planning, Health screening services, first aid, prevention of communicable and non-communicable diseases, smoking cessation, Child & mother care.
7. **Home Medicines Review Program:** Definition, objectives, Guidelines, method and outcomes, Research in community pharmacy.
8. **Cardiovascular System:** Hypertension, Congestive cardiac failure, Acute coronary syndrome, Arrhythmias, Hyperlipidemias.
9. **Respiratory System:** Asthma, Chronic obstructive airways disease, Drug induced pulmonary diseases.
10. **Endocrine System:** Diabetes, Thyroid diseases.
11. **Gastrointestinal System:** Peptic ulcer diseases, Reflux esophagitis, Inflammatory bowel diseases, Jaundice & hepatitis, Cirrhosis, Diarrhoea and Constipation, Drug-induced liver disease.
12. **Hematological Diseases: Anaemia, Deep vein thrombosis, Drug induced** hematological disorders.
13. **Bone and Joint Disorders:** Rheumatoid arthritis, Osteoarthritis, Gout, Osteoporosis Dermatological Diseases: Psoriasis, Eczema and scabies, impetigo, drug induced skin disorders Ophthalmology: Conjunctivitis, Glaucoma.

- 14. Patient Data Analysis:** The patient's case history, its structure and use in evaluation of drug therapy & Understanding common medical abbreviations and terminologies used in clinical practices.
- 15. Clinical laboratory tests used in the evaluation of disease states, and interpretation of test results**
 - a. Haematological, Liver function, Renal function, thyroid function tests, tests associated with cardiac disorders.
 - b. Fluid and electrolyte balance
 - c. Microbiological culture sensitivity tests
 - d. Pulmonary Function Tests
- 16. Drug & Poison Information**
 - a. Introduction to drug information resources available
 - b. Systematic approach in answering DI queries
 - c. Critical evaluation of drug information and literature
 - d. Preparation of written and verbal reports.
 - e. Establishing a Drug Information Centre
 - f. Poisons information- organization & information resources
- 17. Pharmacovigilance & Clinical Research**
 - a. Scope, definition and aims of pharmacovigilance
 - b. Adverse drug reactions - Classification, mechanism, predisposing factors, causality assessment (different scales used) & Reporting, evaluation, monitoring, preventing & management of ADRs
 - c. Role of pharmacist in management of ADR.
 - d. Drug development process.
 - e. Various phases of clinical trial.
 - f. Abbreviated New Drug Application submission.
 - g. Good Clinical Practice – ICH, GCP, Central drug standard control organisation (CDSCO) guidelines.
 - h. Challenges in the implementation of guidelines.
 - i. Ethical guidelines in Clinical Research.
 - j. Composition, responsibilities, procedures of IRB / IEC.
 - k. Overview of regulatory environment in USA, Europe and India.
 - l. Designing of clinical study documents (protocol, CRF, ICF, PIC)
 - m. Informed consent Process
 - n. Data management and its components
 - o. Safety monitoring in clinical trials.
- 18. Communication skills:** including patient counselling techniques, medication history interview, and presentation of cases.

19. **Pharmaceutical Care Concepts**
20. **Critical Evaluation of Biomedical Literature**
21. **Medication Errors**

Pharmaceutical Analysis

1. **Spectroscopy:** Introduction, Theory, Laws, Instrumentation associated with UV-Visible spectroscopy, IR spectroscopy, Spectrofluorometric, Flame emission spectroscopy and Atomic absorption spectroscopy, NMR spectroscopy, Mass Spectroscopy.
2. **Chromatography:** Principle, apparatus, instrumentation, chromatographic parameters, factors affecting resolution and applications of the following:
 - a) Paper chromatography b) Thin Layer chromatography c) Ion exchange chromatography d) Column chromatography e) Gas chromatography f) High Performance Liquid chromatography g) Affinity chromatography.
3. **Qualification and Validation:** Definition of Qualification and Validation of analytical instruments, Advantage of Validation, Streamlining of Qualification & Validation process and Validation Master Plan. Analytical method validation and computerized system validation.
4. **General Principles of Intellectual Property:** Concepts of Intellectual Property (IP), Intellectual Property Protection (IPP) and Intellectual Property Rights (IPR).
5. **Impurity and Stability Studies:** Definition, classification of impurities in drug Substance or Active Pharmaceutical Ingredients and quantification of impurities as per ICH guidelines.
6. **Modern Bio-Analytical Techniques:** Extraction of drugs from biological samples, Separation of drugs from biological samples using different techniques and Guidelines for BA/BE studies.
7. **Quality Control and Quality Assurance:** Concept and Evolution of Quality Control and Quality Assurance, cGMP guidelines according to schedule M, USFDA (inclusive of CDER and CBER) Pharmaceutical Inspection Convention (PIC), WHO and EMEA covering, Analysis of raw materials, finished products, packaging materials, in process quality control (IPQC), Developing specification (ICH Q6 and Q3).
8. **Herbal and Cosmetic Analysis:** Herbal remedies- Toxicity and Regulations,

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

Adulteration and Deterioration, Regulatory requirements for setting herbal drug industry, testing of natural products and drugs: Monographs of Herbal drugs, Herbal drug-drug interaction and Evaluation of cosmetic products.

Pharmaceutical Regulatory Affairs

1. New Drug Discovery and Development

- Stages of drug discovery and drug development process.
- Pre-clinical studies and non-clinical activities,
- Clinical studies and its phases,
- Innovator and generics, Concept of generics, Generic drug product development.

2. Quality Management System:

- Total Quality Management,
- Quality by design,
- Six Sigma concept,
- Out of Specifications (OOS),
- ICH process and guidelines for quality, safety, efficacy and multidisciplinary guidelines,
- ISO 13485 and ISO Risk Management Standard.

3. Dossier:

- Overview of Dossier, content and organization of dossier,
- ICH Common Technical Document (CTD) and its modules,
- Paper, NeES and eCTD submissions
- ASEAN Common Technical Document (ACTD) and its modules

4. Ethics in Clinical Research:

- Historical Perspectives: Nuremberg Code, Thalidomide study, Nazis Trials, Tuskegee Syphilis Study, The Belmont Report, The declaration of Helsinki
- Ethics in Randomized clinical trials,
- Role of placebo in clinical trials,
- Ethics of clinical research in special population,
- Data Safety Monitoring Board (DSMB),
- Ethical principles governing Informed Consent Process and documentation,
- Role of sponsor and investigators in ethical conduct of Clinical research
- Institutional Review Board (IRB)/independent Ethics Committee (IEC): composition and functions

5. Central Drug Standards and Control Organization (CDSCO)

- CDSCO organization and functions,
- Medical Device Rules – 2017,

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

- New Drugs and Clinical Trial Rules – 2019,
- Cosmetics Rules – 2020,
- Development and approval of Similar Biologics.
- National Blood Policy.

6. United States Food and Drug Administration (USFDA)

- Organization and functions,
- Code of Federal Regulations (CFR),
- Hatch Waxman Act
- Orange Book and Purple Book
- Investigational New Drug Application (INDA),
- New Drug Application (NDA)
- Abbreviated New Drug Application (ANDA)
- Biological License Application (BLA)
- Premarket Notification/510(k) application
- Pre-Market Approval (PMA) of Medical Devices
- Difference between generic drug and biosimilars
- Investigational Device Exemption (IDE)
- FDA Inspection and Enforcement

7. European Medicines Agency (EMA)

- Organization and functions
- Active Substance Master File (ASMF) and Plasma Master File (PMF)
- Investigational Medicinal Product Dossier (IMPD)
- Marketing Authorization Procedures in EU
- Compliance of European Pharmacopoeia (CEP) and Certificate of Suitability (CoS)
- CE Marking
- Comparability/biosimilarity assessment,
- TSE/ BSE evaluation
- European Regulation on Novel Foods and Novel Food Ingredients.

Pharmacology

1. Neurotransmission

- a. General aspects and steps involved in neurotransmission.
- b. Neurohumoral transmission in autonomic nervous system (Detailed study about neurotransmitters- Adrenaline and Acetyl choline).

2. Central Nervous System Pharmacology:

General and local anesthetics Sedatives and hypnotics, drugs used to treat anxiety. Depression, psychosis, mania, epilepsy, neurodegenerative diseases. Narcotic and non-narcotic analgesics.

3. Cardiovascular Pharmacology:

Diuretics, antihypertensives, antiischemics, anti-arrhythmics, drugs for heart failure and hyperlipidemia.

4. Laboratory Animals:

CPCSEA guidelines to conduct experiments on animals.
Good laboratory practice.

5. Preclinical Screening of new substances for the Pharmacological Activity using *in vivo*, *in vitro*, and other possible animal alternative models.

General principles of preclinical screening. CNS Pharmacology, Respiratory Pharmacology, Cardiovascular Pharmacology.

6. Cell Biology:

Genome organization. Gene expression and its regulation, importance of siRNA and micro RNA, gene mapping and gene sequencing. Intercellular and intracellular signaling pathways.

Recombinant DNA technology and gene therapy.

7. Gene Therapy:

Various types of gene transfer techniques, clinical applications and recent advances in gene therapy.

8. Mechanism of Drug Actions at Cellular and Molecular Level: Endocrine Pharmacology: Chronopharmacology: Chronopharmacology.

9. Regulatory Guidelines for Conducting Toxicity Studies: OECD, ICH, EPA and Schedule Y OECD principles of Good laboratory practice (GLP).

Acute, sub-acute and chronic- oral, dermal and inhalational studies as per OECD guidelines.

10. Toxicokinetics:

Toxicokinetic evaluation in preclinical studies, saturation kinetics Importance and applications of toxicokinetic studies. Alternative methods to animal toxicity testing.

Regulatory Perspectives of Clinical Trials.

Pharmacognosy

1. Extraction Technology for Medicinal and Aromatic Plants

Study of various extraction techniques employed for medicinal and aromatic plants. Factors affecting choice of extraction.

Methods of extraction, isolation, purification, identification and estimation of

alkaloids, glycosides, steroids, terpenoids, and volatile oils.

Applications of chromatography in isolation, identification and purification of phytoconstituents.

High throughput screening (HTS). Ethnomedicine approach for drug discovery

2. Chemistry of natural products

Chemistry, general methods of identification, methods of extraction and estimation of Alkaloids, Glycosides, Coumarins, Polyphenols, Steroids and Terpenes.

Applications of UV, IR, NMR, ¹HNMR, ¹³CNMR and Mass spectroscopy for structural elucidation of phytoconstituents.

3. Advances in natural product research

Nutraceuticals - Antioxidants, Vitamins Supplements, Dietary fibres, PUFA

Bitters, colouring agents and sweetening agents

Potentials of Marine pharmacognosy

Methods of authentication of plants. Microtechnique and microscopy. Preparation of herbarium and herbal database.

4. Phytopharmacology

General concept of pharmacological screening.

Bioavailability and pharmacokinetic significance for herbal drugs with examples of clinically used herbal drugs. Clinical trials for herbal drugs.

Different models for screening of the following pharmacological activities of herbal drugs including *in-vitro* and enzyme bioassays.

- a. Adaptogens
- b. Anti-cancer
- c. Anti-diabetics & Hypolipidaemics
- d. Hepatoprotective and Anti-hepatotoxics
- e. Anti-microbial
- f. Antioxidants
- g. Anti-inflammatory and anti-ulcer

Use of cell line cultures and enzymes for screening of anti-cancer, cytotoxic, antidiabetic and adaptogenic activities.

5. Quality control of herbal drugs (crude drugs, extracts and formulations).

Quality control methods for medicinal plant materials. Evaluation and standardization of herbal drugs according to WHO guidelines.

Standardization requirements of herbal medicines and traditional preparations: their quality, safety and efficacy assessment. Quality control of single and multicomponent classical Ayurvedic formulations by study of HPTLC and HPLC fingerprints.

Role of marker compounds for analysis of drugs, finger printing, phytoequivalence studies in herbal drug standardization

Importance of monographs of medicinal plants, their comparative study as per-

Indian Pharmacopoeia, Indian Herbal Pharmacopoeia, API, Ayurvedic formulary of India, British Herbal Pharmacopoeia, American Herbal Pharmacopoeia.

6. Herbal Formulations

Shelf life study- protocols to study stabilization of herbal based products. Assessment of physical, physico-chemical and chemical parameters at different stages

Novel drug delivery systems for plant actives and extracts and their applications.

Nanotechnology in natural product research-Introduction to nanotechnology, applications, types of nano formulations. Preparation and characterization of nano formulations for plant secondary metabolites.

7. Herbal Cosmetics

Raw materials of herbal origin and their uses in cosmetics: oil, waxes, gums, colors, perfumes, protective agents, bleaching agents, preservatives, antioxidants and other ancillary agents. Formulation and standardization of herbal cosmetics like skin care preparations, deodorants and hair care preparations.

Faculty of Natural Sciences

Biochemistry

Chromatographic techniques: Partition chromatography, adsorption chromatography, ion exchange chromatography, gel filtration chromatography, affinity chromatography, GLC, HPLC, HPTLC, and FPLC.

Electrophoretic techniques: Polyacrylamide gel electrophoresis, SDS-PAGE, 2D electrophoresis, agarose gel electrophoresis, isoelectric focusing, Separation of proteins and nucleic acids. Denaturing gradient gel electrophoresis and temperature gradient gel electrophoresis. Visualizing separated components - staining, fluorescence, Periodic acid-Schiff staining, zymogram and reverse zymogram.

Spectroscopic techniques: UV/visible, fluorescence, circular dichroism

Centrifugation: Subcellular fractionation using differential and gradient centrifugation.

Microscopic techniques: Scanning and transmission electron microscopes, Confocal microscopy.

Molecular biology techniques: Isolation and purification of RNA, DNA and proteins, different separation methods. PCR, RT-PCR and Real time PCR technique and their applications.

Blotting techniques: Dot blot, Southern, Northern and Western blot.

In vitro antigen-antibody reaction: Precipitation, agglutination, complement fixation, immuno diffusion, immunoelectrophoresis, immunofluorescence, RIA and ELISA.

Proteins: Determination of primary structure: Sequencing strategies- N-terminal and C-terminal sequencing methods. Determination of s-s-bond position. Secondary, Tertiary and quaternary structures.

Nucleic Acids: Physiochemical properties of nucleic acids, melting of DNA, T_m , factors affecting T_m , Cot curve, Chemical reactions of DNA and RNA. Sequencing of DNA - Dideoxy method. Secondary structural features in DNA, stem loop structure, palindromic sequences, cruciforms. DNA protein interaction, zinc finger leucine zipper, helix-turn-helix, other motifs.

Enzymology: Enzyme specificity, specific activity, assay methods - continuous, end point and kinetic assay. Units of enzyme activity, IU and Katal. Enzyme Kinetics: Michaelis-Menten equation, V_{max} , K_m and their significance. Lineweaver-Burk plot. Inhibition: Reversible and irreversible inhibition. competitive, non-competitive, uncompetitive inhibition and suicide inhibition. Determination of K_i and K_d .

Biostatistics: Measures of Central tendency and Dispersion.

Probability distribution: Binomial, Poisson and Normal. Parametric and Nonparametric statistics, Confidence Interval, Errors.

Quantitative Techniques: Levels of significance, Regression and Correlation, t-test; Analysis of variance and multiple range tests, chi-square test, experimental design, data transformation.

Biochemical calculations: Specific gravity, percent solution, dilution and dilution factors, ionic strength; molarity, normality, mole concept, Avogadro principles. Acids and bases, buffers, pH, pKa, Henderson-Hasselbach equation, buffer capacity, buffering capacity of amino acids.

Determination of LD50, ED50, IC50.

Biotechnology

Basic Laboratory Principles: Calculation and Concept of pH, buffer, osmosis, normality, molarity, molality, mole, ppm, ppb, titration, dilutions and concentrations.

Chromatographic Techniques: General principles, TLC, column chromatography (Ion exchange chromatography, Exclusion chromatography, GLC, Affinity chromatography) HPLC- Different types and its applications.

Electrophoretic Techniques: General principles, Native gels, SDS-PAGE, IEF, 2D gel electrophoresis, Agarose gel electrophoresis.

Spectroscopic Techniques: UV/visible, fluorescence, circular dichroism

Microscopic Techniques: Light microscopy, scanning and transmission electron microscopy, fluorescent and confocal microscopy.

Unit 3: Enzyme Technology and Medicinal Chemistry.

Nomenclature and Classification of Enzymes. Criteria of purity of enzymes- Specific activity. Enzyme units-Katal and IU. Enzyme activity- chemical nature of enzymes.

Enzyme Kinetics: Factors affecting the enzyme activity- Concentration, pH and temperature. Kinetics of a single-substrate enzyme catalysed reaction, Michealis-Menten Equation, Km, Vmax, L.B Plot, Turnover number, Kcat. Kinetics of Enzyme Inhibition. Kinetics Allosteric enzymes.

Clinical enzymes- Enzymes as thrombolytic agents, Anti-inflammatory agents, streptokinase, asparaginase, Isoenzymes like CK and LDH, Transaminases (AST, ALT), Amylases, Cholinesterase. Immobilization of enzymes, ELISA.

Enzyme Structure activity Relationship (SAR) and Drug Discovery- Properties of Enzymes. Lead Compound, Structure based drug design, combinatorial chemistry, High-throughput screening.

Medicinal Chemistry: Concept of IC50, LD50, MIC, usage of biostatistical tools, SAR, Graphing tools.

Animal Cell Cultures Techniques: Types of primary culture; Chicken embryo fibroblast culture; Chicken liver and kidney culture; Secondary culture; Trypsinization; Cell separation; Continuous cell lines; Suspension culture; Organ culture; Behaviour of cells in culture conditions: division, growth pattern, metabolism of estimation of cell number; Development, Characterization and maintenance of cell lines, Cryopreservation; Commercial scale production of animal cells, stem cells and their

application; Application of animal cell culture for in vitro testing of drugs; Testing of toxicity of environmental pollutants in cell culture.

Cell characterization: cytotoxicity assays, cell quantitation, cell culture contamination: monitoring and eradication, cryopreservation, confocal microscopy.

Bioinformatics and Biostatistics tools: Major bioinformatics resources (NCBI, EBI, ExPASy); Sequence and structure databases and analysis, Sequence analysis, Phylogeny, Comparative genomics; Molecular docking, Identification of active site binding, DFT calculation, 3D-QSAR, Molecular modeling and simulations. Overview and functions of a computer system, Statistics: Descriptive statistics, Correlation and regression, Hypothesis Testing, Probability theory.

Microbiology

Microbial Taxonomy and Diversity

ICNB rules, major characteristics used to classify microorganisms. Taxonomy of bacteria - Bergy's manual of systematic bacteriology. Classification of fungi. Microbes in extreme environments. Extremophiles - Psychrophilic, thermophilic, acidophilic, alkalophilic, halophilic and barophilic. Mechanism of adaptation in extremophilic microorganism. Importance and conservation of microbial diversity, metagenomics, In situ conservation and Ex situ conservation.

Microbial enzymes: Isolation and purification of microbial enzymes. Structure and classification, mechanism of enzyme actions: lock and key model, induced fit theory. Factors affecting enzyme activity - pH, temperature and substrate and enzyme concentration. Enzyme inhibition and enzyme regulation. Significance and applications of enzyme inhibitors. Isoenzymes.

Food Microbiology: Detection of food-borne microorganisms, Microbial spoilage of foods, Food poisoning and intoxication, Food borne diseases, Food preservation, Food Packaging - types of containers, Food packaging materials and forms, Package testing, Packages with special features, Safety of food packaging. Microbial indicators of food safety and quality, Food laws and standards.

Agricultural Microbiology: Plant pathology, Diagnosis of plant diseases, Parasitism and disease development, Entry of pathogens to the host, Effect on physiology of host, Plant disease epidemiology, Environment and Plant diseases, Defense Mechanism of Plant Disease, Plant Diseases and their management, Host-pathogen interaction, Biofertilizer, PGPR, Biopesticides. Biodeterioration and Biomagnification.

Viruses and the future: Promises and problems. Emerging diseases, sources and causes of emergent virus diseases. Silver lining: viruses as therapeutic agents, viruses for gene delivery, viruses to destroy other viruses. Importance of studying modern virology.

Industrial Microbiology: Fermentation, Development of inocula, Fermenters, Batch and Continuous fermentation, Industrially important microorganisms, strain improvement and preservation, Media for industrial fermentation, sterilization,

upstream processing, downstream processing, Industrial production of energy fuels (solvents), organic acids, enzymes (amino acids), food additives, Health care products (antibiotics, vitamins), probiotics, biomass production (SCP).

Microscopy: Working principle, construction and operation of different types- simple, compound, Phase contrast, Fluorescent and Electron microscopes. Sample preparation for electron microscopy. Confocal microscopy. Micrometry and photomicrography.

Sterilization and disinfection: Principles, types and techniques. Physical, chemical, radiation and mechanical methods.

Isolation techniques: Isolation of pure cultures- dilution, spread plate, streak plate, pour plate and micromanipulator method. Colony morphology and other characteristics of cultures. Maintenance and preservation of pure cultures, culture collection center - National and International. Direct microscopic count and standard plate count. Membrane filtration.

Pure culture techniques (spread plate, pour plate and streak plate methods).

Microbiological stains and staining techniques: Types of stains and principles of staining. Stains for bacteria, fungi, algae and protozoa, spirochetes, stains for mycoplasma. Preparation of bacterial smears for light microscopy: fixation, simple staining, differential staining, structural staining (capsule, flagella, cell wall and endospore of bacteria), and nuclear staining.

Molecular techniques for genome analysis: Blotting techniques- Southern, Northern and Western blotting techniques. PCR, RT-PCR and Real time PCR technique and their applications.

In vitro antigen-antibody reaction: Precipitation, agglutination, complement fixation, immuno diffusion, immunoelectrophoresis, immunofluorescence, RIA and ELISA.

Biostatistics: Measures of Central tendency and Dispersion.

Probability distribution: Binomial, Poisson and Normal. Parametric and Nonparametric statistics, Confidence Interval, Errors.

Quantitative Techniques: Levels of significance, Regression and Correlation, t-test; Analysis of variance and multiple range tests, chi-square test, experimental design, data transformation. Use of Statistics in Biosciences, Use of Computers in Quantitative analysis.

Biochemical calculations: Specific gravity, percent solution, dilution and dilution factors, ionic strength; molarity, normality, mole concept, Avogadro principles. Acids and bases, buffers, pH, pKa, Henderson-Hasselbach equation, buffer capacity, buffering capacity of amino acids.

Determination of LD50, ED50, IC50.

Molecular Biology

Unit I: Fundamentals and cell organization

Structural organization and function of intracellular organelles (Cell wall, nucleus, mitochondria, Golgi bodies, lysosomes, endoplasmic reticulum, peroxisomes, plastids, vacuoles, chloroplast, structure & function of cytoskeleton and its role in motility).

Organization of genes and chromosomes (Operon, unique and repetitive DNA, interrupted genes, gene families, structure of chromatin and chromosomes, heterochromatin, euchromatin, transposons).

Unit II: Biochemical and Biophysical Techniques

Centrifugation, Analytical Centrifugation and Marker enzyme analysis,

Flow Cytometry: Principle and design of flow cytometer, cell sorting. Detection strategies in flow cytometry and parameters measured by flow cytometry.

Chromatographic techniques, HPLC and RP-HPLC - Principle, instrumentation, application FPLC, LC, Peptide mapping and N-terminal sequencing of proteins.

Spectroscopic Techniques: Beer-Lambert's Law and its limitations, Extinction coefficient,

Mass spectrometry - Principle and application, ESI, fragmentation, MALDI-TOF, LC-MS, LC-MS-MS, Physical methods of determining size, shape and structure of molecules - NMR, ESR, X-Ray Diffraction and crystallography. Principles and applications: Vibration Spectra - IR and Raman, principles and applications: Polarized Light: Plane and circularly polarized light, ORD and CD and their applications.

Radioisotopes, Labelling and Applications of radioactivity

Unit III: Molecular Biology Techniques and Genetic Engineering

Electrophoretic Techniques and Blotting Techniques

Isolation and purification of RNA, DNA (genomic and plasmid) and proteins, different separation methods.

Molecular cloning of DNA or RNA fragments in bacterial and eukaryotic systems. Expression of recombinant proteins using bacterial, animal and plant vectors.

Isolation of specific nucleic acid sequences

Generation of genomic and cDNA libraries in plasmid, phage, cosmid, BAC and YAC vectors.

In vitro mutagenesis and deletion techniques, gene knock out in bacterial and eukaryotic organisms.

Protein sequencing methods, detection of post translation modification of proteins. DNA sequencing methods, strategies for genome sequencing.

Methods for analysis of gene expression at RNA and protein level, large scale expression, such as micro array-based techniques.

Unit IV: Cancer Biology

Cancer: Genetic rearrangements in progenitor cells, oncogenes, tumor suppressor genes, cancer and the cell cycle, virus-induced cancer, metastasis, interaction of cancer cells with normal cells, apoptosis, therapeutic interventions of uncontrolled cell growth.

Unit V: Enzymology

Enzyme Kinetics: Rate of reaction, order and molecularity. Michaelis-Menton equation, initial velocity approach and steady state approach. V_{max} , K_m and their significance. Linear transformation of Michaelis-Menton equation - Line weaver Burk plot, Eddie Hofstee, Haynes - Wolf and Cornish - Bowden plot. Turnover number. Factors affecting enzyme kinetics - Effect of enzyme concentration, substrate concentration, pH, temperature and activators and inhibitors.

Kinetics of bi-substrate reactions, Mechanisms of enzyme catalysis

Mechanisms of Action of Specific Enzyme: Chymotrypsin, zymogen activation, acid-base catalysis, charge relay network. Lysozyme, alcohol dehydrogenase, ribonuclease, carboxypeptidase A, RNA as an enzyme and Coenzymes.

Unit VI: Molecular Cell Biology and Gene Expression

Extracellular matrix and cell-cell interaction: Extracellular components - cell matrix adhesion, collagens – types of collagens, elastin, fibronectins, basal lamina and its components, connective tissues, proteoglycans and laminin. Cell - cell adhesion, cadherins, CAMS (NCAMS), selectins, integrins, desmosomes, hemidesmosomes, tight junction, gap junction, Catenins, actins, Tubulins, intermediate filaments, glycosaminoglycans.

Cell Cycle: Cell division types, phases of cell cycle, mitosis and meiosis, role of centrioles, role of spindle fibres, comparison of cell division in prokaryotes and eukaryotes. Cell cycle events in yeasts and animal cells; Cell cycle check points, cell cycle regulatory genes, different types of cyclins (D, E, A, and B), cdk's & their role, phase transition regulation (G1-S, S-G2, G2-M), cell cycle checkpoints, synthesis and degradation of cyclins, structural features of CDKs and cyclins, activation and inactivation of cyclin dependent kinases.

Cell Death: Apoptosis, necrosis and autophagy role and mechanism, caspases, calpains and cathepsins. Cell death signals, survival factors, pro-survival pathways, cell death genes. Cell death pathways, role of cytochromes, APAF, pro & anti apoptotic molecules.

Molecular markers for Apoptosis: Membrane markers, Caspase substrate (PARP) cleavage and DNA ladders.

Physics

UNIT-1: MATHEMATICAL METHODS OF PHYSICS: Linear vector spaces. Eigenvalues and eigenvectors. Linear ordinary differential equations of first and second order. Special functions. Partial differential equations. Green's function. Fourier and Laplace transforms. Complex analysis: analytic functions, poles and residues, ^[L]_[SEP] series expansion and evaluation of integrals.

UNIT-2: CLASSICAL MECHANICS: Lagrangian and Hamiltonian formalism, Equations of motion, Central force problem, Conservation laws, Small oscillations and normal modes, Special theory of relativity.

UNIT-3: ELECTROMAGNETIC THEORY: Gauss's law, Laplace and Poisson equations, boundary value problems. Ampere's law. Electromagnetic induction. Maxwell's equations. Scalar and vector potentials. Gauge invariance. Conservation laws for electromagnetic fields. Electromagnetic waves in free space. Dielectrics and conductors. Reflection and refraction of electromagnetic waves. Dynamics of charged particles in static and uniform electromagnetic fields.

UNIT-4: QUANTUM MECHANICS: Wavefunctions and operators, Heisenberg uncertainty principle, Schrödinger equation (time-dependent and time-independent). Eigenvalue problems (particle in a box, harmonic oscillator, hydrogen^[L]_[SEP] atom). Tunneling. Orbital and spin angular momenta. Addition of ^[L]_[SEP] angular momenta. Time-independent perturbation theory. Variational^[L]_[SEP] method. Time dependent perturbation theory: Fermi's golden rule and selection rules. Identical particles and indistinguishability.

UNIT-5: THERMODYNAMIC AND STATISTICAL PHYSICS: Laws of thermodynamics. Thermodynamic potentials, Maxwell relations, chemical potential, phase equilibria. Phase space, micro- and macro-states, ensembles and partition functions. Free energy and its connection with thermodynamic quantities. Classical and quantum statistics, distribution functions. Ideal Bose and Fermi gases. First- and second-order phase transitions. Bose-Einstein condensation. Diffusion equation.

UNIT-6: ATOMIC AND MOLECULAR PHYSICS: Quantum states of electrons in an atom. Relativistic corrections of atomic energy levels. LS & JJ couplings. Zeeman, Paschen-Bach & Stark effects. Magnetic resonance. Born-Oppenheimer approximation. Electronic, rotational, vibrational and Raman spectra of diatomic molecules. Lasers: spontaneous and stimulated emission, Einstein A & B coefficients. Optical pumping, population inversion, rate equation.

UNIT-7: NUCLEAR AND PARTICLE PHYSICS: Basic nuclear properties: size, shape and charge distribution, spin and parity. Binding energy, semi-empirical mass formula, liquid drop model. Nuclear force. Single-particle shell model, its validity and limitations. Rotational spectra. Elementary ideas of alpha, beta and gamma decays and their

selection rules. Fission and fusion. Nuclear reactions. Classification of fundamental forces. Elementary particles and their quantum numbers (charge, spin, parity, isospin, strangeness, etc.).

UNIT-8: CONDENSED MATTER PHYSICS: Bravais lattices. Reciprocal lattice. Diffraction and structure factor. Bonding of solids. Elastic properties, phonons, lattice specific heat. Free electron theory of metals and electronic specific heat. Drude model of electrical and thermal conductivity. Hall effect and thermoelectric power. Band theory of solids: metals, insulators and semiconductors. Superconductivity: type-I and type-II superconductors. Magnetism: types of magnetic ordering and Curie-Weiss law.

UNIT-9: ELECTRONICS: Semiconductor devices (diodes, junctions, transistors, and field effect devices), device characteristics. Operational amplifiers and their applications. Digital techniques and applications (registers, counters, comparators and similar circuits).

UNIT-10: EXPERIMENTAL METHODS: Data analysis. Error estimation. Measurement of electrical resistivity, Hall coefficient, magnetic susceptibility and thermal conductivity. Interference and diffraction experiments. Spectroscopic measurements such as Zeeman effect, Electron Spin Resonance, and Raman effect. Experimental determination of fundamental constants such as Planck's constant, e/m , and Boltzmann constant.

Chemistry

Unit I: Inorganic Chemistry

Chemical Periodicity- Structure and bonding in homo and heteronuclear molecules, including shapes of molecules (VSEPR Theory). Concepts of acids and bases, Hard-Soft acid base concept, Non-aqueous solvents. Main group elements and their compounds: Allotropy, synthesis, structure and bonding, industrial importance of the compounds.

Transition elements and coordination compounds: structure, bonding theories, spectral and magnetic properties, reaction mechanisms. Inner transition elements: spectral and magnetic properties, redox chemistry, analytical applications.

Organometallic Compounds: synthesis, bonding and structure, and reactivity. Organometallics in homogeneous catalysis. Cages and metal clusters.

Bioinorganic Chemistry: photosystems, porphyrins, metalloenzymes, oxygen transport, electron-transfer reactions; nitrogen fixation, metal complexes in medicine.

Unit II: Physical Chemistry

Basic Principles of Quantum Mechanics: Postulates; operator algebra; exactly solvable systems: particle-in-a-box, harmonic oscillator and the hydrogen atom, including shapes of atomic orbitals; tunnelling.

Approximate Methods of Quantum Mechanics: Chemical applications of group theory; symmetry elements; point groups; character tables; selection rules. Molecular spectroscopy: Rotational and vibrational spectra of diatomic molecules.

Chemical applications of group theory; symmetry elements; point groups; character tables; selection rules.

Chemical Thermodynamics: Laws, state and path functions and their applications; thermodynamic description of various types of processes; thermodynamics of ideal and non-ideal gases, and solutions.

Electrochemistry: Nernst equation, redox systems, electrochemical cells; Debye-Huckel theory; electrolytic conductance – Kohlrausch's law and its applications; ionic equilibria; conductometric and potentiometric titrations.

Macromolecules: Organic polymers – Classification, Principles of polymerization, types of polymers. Elastomers – Natural rubber – processing, structure, compounding, Synthetic Rubbers. Plastics – definition, classification and types and their method of preparation. Inorganic polymers – preparation, properties and uses of the inorganic polymers. Determination of molecular weight and size, Experimental methods of their determination.

Unit III: Organic Chemistry

IUPAC nomenclature of organic molecules including regio- and stereoisomers.

Reactions, Synthesis and mechanism involving- Alkanes, Alkenes, Alkynes, Arenes, Alcohols, Phenols, Aldehydes, Carboxylic acids. Aliphatic and Aromatic Substitution reactions: Nucleophilic and Electrophilic.

Principles of stereochemistry: Configurational and conformational isomerism in acyclic and cyclic compounds; stereogenicity, stereoselectivity, enantioselectivity, diastereoselectivity and asymmetric induction.

Aromaticity: Benzenoid and non-benzenoid compounds – generation and reactions.

Organic reactive intermediates: Generation, stability and reactivity of carbocations, carbanions, free radicals, carbenes, benzyne and nitrenes. Organic reaction mechanisms involving addition, elimination and substitution reactions with electrophilic, nucleophilic or radical species. Determination of reaction pathways.

Pericyclic reactions – Electrocyclisation, cycloaddition, sigmatropic rearrangements and other related concerted reactions. Principles and applications of photochemical reactions in organic chemistry.

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

Chemistry of Natural Products: alkaloids, terpenoids, steroids, carbonyl compounds.

Synthesis and reactivity of common heterocyclic compounds containing one or two heteroatoms (O, N, S).

Structure determination of organic compounds by IR, UV-Vis, ^1H & ^{13}C NMR and Mass spectroscopic techniques.

Unit IV: Chemistry in nanoscience and technology

Types of Nanostructures: Definition of a Nano system – Types of Nanocrystals-One Dimensional (1D)-Two Dimensional (2D) –Three Dimensional (3D) nanostructured materials – Quantum dots – Quantum wire, Quantum wells, Core/Shell structures, their electronic properties, Physical and chemical methods for preparation of nanomaterials.

Carbon nanomaterials: Fullerenes and other bucky balls. Carbon nano-tubes: Fabrication structure,

Methods of Preparation: Plasma arc, Chemical vapour deposition (CVD), sol-gel, silicagel, hydrolysis, condensation, polymerization of monomers to form nanoparticles, solvothermal and hydrothermal methods, electrochemical, ball milling and pulsed laser methods.

Nanomaterials characterization techniques: Imaging techniques: Scanning Electron Microscope (SEM) – Field Emission scanning Electron microscope (FESEM)-Atomic force microscopy (AFM), X-Ray Diffraction (XRD) and Transmission Electron Microscopy (TEM). Spectroscopic techniques: Infra-red spectroscopy (FT-IR)- UV-visible-Absorption and Photoluminescence.

Mathematics

Unit 1: Partial Differential Equations:

Classifications, systems of surfaces and characteristics, examples of hyperbolic, parabola and elliptic equations, method of direct integration, method of separation of variables, One-dimensional wave and heat equations, Various possible solutions of wave and heat equations.

Unit 2: Numerical Methods:

Solutions of algebraic and transcendental equations: Bisection, iterative and Newton-Raphson methods Introduction, Lagrange and Newton Interpolations, Interpolating polynomials - piecewise polynomial interpolation, Spline's interpolation formula, Hermite Interpolation, Bivariate Interpolation, least square approximations. Numerical integration: Newton's cotes formula, Simpson's rules, Weddle's rule, Gaussian

Unit 3: Ordinary Differential equations:

Solutions of ordinary differential equations: Euler's, Picard's method, Initial Value and boundary value problems, Runge - Katta's Method of order IV for 1st and 2nd order

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

ordinary differential equations. System of equations predictor - corrector formulae, Shooting method

Unit 4: Probability

Random experiments, sample spaces, event, axioms, addition and multiplication rules, conditional probability, independent events, Baye's theorem.

Unit 5: Linear Algebra

Matrix Algebra, Consistency of Systems of linear equations, Eigen values and Eigen vectors. Gauss Seidel Iterative method, LU Decomposition method.

Materials Science

Unit 1: Materials

Metals & Alloys: Aluminum & Its Alloys, Properties and Application; Copper & Its Alloys, properties and applications; Titanium & Its Alloys, Properties and Application.

Ceramic Materials: Definition, Classification of Ceramic Materials, Processing Methods, Properties and Its Industrial, Medical and Commercial Applications.

Polymer Materials: Definition, Classification of Polymers, Processing Methods, Properties and Its Industrial, Medical and Commercial Applications.

Composites: Definition, Types of Matrix Materials, Types of Reinforcements, Selection of Composites, Properties, Applications. Numericals on Rule of Mixture for density, elastic modulus and tensile strength.

Unit 2: Processing of Materials

Processing of bulk, thin film, powders, crystals and amorphous materials; Top seeded solution growth; sol-gel techniques; high temperature solution; hydrothermal and solvothermal methods; Melt methods- CVD; CVT; MBE; Plasma; Laser ablation. Crystal growth of selected functional materials - quartz, diamond, chalcogenides, GaAs, Si.

Unit 3: Characterisation Techniques

X-ray diffraction, spectroscopic techniques like UV-vis, FT-IR, Raman, Photoluminescent and XPS ; Thermal analysis : TGA ; DTA ; DSC ; dilatometry ; (Thermal expansion) Principles and applications. Electron imaging techniques; SEM; TEM; FESEM; STM; AFM; SPM; HRTEM; HRSEM, Particle size measurement, surface area measurement and Vibrating sample Magnetometer.

Unit 4: Crystal Structure of Materials

Periodic Array of Atoms Crystal Lattice-Lattice translation Vectors - United-Basis Symmetry Consideration- Bravis Lattice – Crystal Planes and Millers Indices- Simple Crystal Structure (HCP, FCC, BCC, SC, Diamond), Bragg's Law, Laue Equations, Reciprocal Lattice, Braggs Condition, Experimental X-Ray Diffraction, Methods of Crystal Structure determination, Laue Method, Rotary Crystal Method, Powder or Debye Scherrer Method, Rietveld Method.

Unit 5: Thermodynamics and Kinetics

Kinetic Theory of Matter, Different States of Matter, Concept of Ideal or Perfect Gas, Kinetic Theory of Gases, Expression for the Pressure of a Gas, Kinetic interpretation of Temperature. Thermal Equilibrium Concept of Temperature (Zeroth Law of Thermodynamics), Concept of Heat-Heat: S Path Function Work; A Path Function, Comparison of Heat and Work – First Law of Thermodynamics, Isothermal Process, Adiabatic Process, Isobaric Process, Isochoric Process, Second Law of Thermodynamics, Entropy, Third law of Thermodynamics.

Unit 6: Properties of Materials

Mechanical Properties: Stress-strain response of metallic, ceramic and polymer materials, yield strength, tensile strength and modulus of elasticity, toughness, plastic deformation, fatigue, creep and fracture.

Electronic Properties: Free electron theory, Fermi energy, density of states, elements of band theory, semiconductors, Hall effect, dielectric behaviour, piezo, ferro, pyroelectric materials.

Magnetic Properties: Origin of magnetism in metallic and ceramic materials, paramagnetism, diamagnetism, ferro and ferrimagnetism.

Thermal Properties: Specific heat, thermal conductivity and thermal expansion, thermoelectricity.

Optical Properties: Refractive index, absorption and transmission of electromagnetic radiation in solids, electrooptic and magneto-optic materials, spontaneous and stimulated emission, gas and solid-state lasers.

Unit 7: Nanomaterials

Definition, Classification of Nano-materials, Synthesis of Nano-materials – ball milling, plasma synthesis and their characterization. Chemical Functionalization and surface modification (*insitu* and *exsitu*)-Recent advances in Thiol-Au and Silane Chemistry-Layerby-Layer synthesis of multilayer assemblies Applications-Quantum dots-nanocores and applications. Detailed description of the fabrication of functionalised Gold Nanocores and their applications in cancer therapy. Devices, Nanodevices.Applications of nanomaterials in catalysis, water treatment, solar cells, sensors, energy storage devices, nanomedicine, food packaging and nanocomposites.

Faculty of Computer Applications & Information Sciences

Computer Applications / Computer Science / Information Science

Module I: Computer System Architecture and Networks

Computer System Architecture-Digital Logic Circuits, Data Representation, Micro operations, Basic Computer Organization, CPU, Pipelining, I/O Organization, Memory Hierarchy, Multiprocessors, Microprogrammed Control.

Data Communication and Computer Networks-Transmission Media, Network Models, OSI & TCP/IP Layers, Routing, Switching, Network Security, Mobile & Wireless Networks, Cloud Computing, IoT, Virtualization.

Module II: Programming, Data Management, Software Systems and Security

Programming Languages and Computer Graphics-Programming Concepts, C, C++, OOP Principles, Web Programming: HTML, XML, Java, Servlets, Applets, 2D & 3D Graphics Transformations, Clipping Algorithms, Rendering.

Database Management Systems-DBMS Concepts, Data Models, E-R Diagrams, Normalization, SQL, Query Optimization, Transactions, Recovery, Security, Data Warehousing, Data Mining, Big Data, NoSQL Databases.

Security Security -Confidentiality, integrity, availability, non-repudiation, authentication, Classical cryptography, symmetric key (DES, AES), public key (RSA, ECC) Network & web security, distributed systems, cloud Security formal methods, protocol verification, block chain security and IoT security.

Module III: Systems Software, Engineering, and Data Algorithms

System Software and Operating Systems-Compilers, Linkers, Macros, Debuggers, Process Management, CPU Scheduling, Deadlocks, Memory, Storage, File & I/O Management, Security, Virtual Machines.

Software Engineering-Process Models, Agile Methods, Requirements & Design, Software Quality, Testing, Estimation, Scheduling, Configuration Management, Reuse & Re-engineering.

Data Structures and Algorithms-Arrays, Stacks, Queues, Trees, Graphs, Hashing, Algorithm Complexity, Design Techniques (DP, Greedy, Backtracking), Advanced Algorithms, Parallel and Randomized Algorithms.

Module IV: Artificial Intelligence and Machine Learning

Artificial Intelligence-AI Approaches, Search Techniques, Knowledge Representation, Expert Systems, NLP, Multi-Agent Systems, Fuzzy Logic, Genetic Algorithms, Neural Networks.

Machine Learning -Overview, ML Paradigms: Supervised, Unsupervised, and Reinforcement Learning, Learning Theory: Inductive Bias, Overfitting, Generalization, and Evaluation Metrics: Accuracy, Precision, Recall, F1-Score, and ROC Curves.

Library and Information Science

UNIT I

Information, Information Science, Information Society, Information as Resource / Commodity,
Information Transfer Cycle - Generation, Collection, Storage and Dissemination,
Role of information in
Planning, Management, Socio-economic Development, Intellectual Property Rights-
Concept, Copyright,
Library and Information Policy at National level.

UNIT II

Laws of Library Science, Library Resource Sharing and Network, Library Movement and Library
Legislation
in India, Library and Information Science Education in India, Library and Information
Profession in Indian
Libraries. Recent Trends in Library and Information Science and Technology.

UNIT III

Organization of Information / Knowledge, Library Classification - Meaning and Definitions, Library
Classification - Canons and Principles, Library Classification Schemes - DDC, UDC, CC, Modes of
Formation of Subjects, Library Cataloguing - Meaning and Definitions, Library Catalogue Codes - CCC
and AACRII, Bibliographic Records - International Standards - MARC and ISBD, Knowledge
Management.

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

UNIT IV

Theories of Management, Systems Analysis, Management Information Systems, Total Quality Management, Budgeting process and methods, Marketing of Information Services, Human Resources Management, Collection Development and Management, costing.

UNIT V

Types of Bibliographies and Bibliographic control, Information Sources • Print and Electronic, Open Educational Resources, Documentation Techniques and services, Indexing and Abstracting, CAS, SDI, Literature search, databases.

UNIT VI

Library Associations in India, UK and USA - ILA, IASLIC IATLIS, ASLIB, SLA and ALA. Library Associations Organisations at International level - IFLA and UNESCO. National and International Information Systems - NISSAT, NASSDOC, INSDOC, DESIDOC, INIS, AGRIS, MEDLARS, INSPEC. Role of UGC in the Growth and Development of Libraries and Information Centers in Institutes of Higher Education in India.

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

Faculty of Humanities & Social Sciences

Education

Unit 1: Philosophical Foundation of Education.

- i. Relationship of Education and Philosophy
- ii. Western Schools of Philosophy: Idealism, Realism, Naturalism, Pragmatism, Existentialism, Marxism with special reference to the concepts of knowledge, reality and values their educational implications for aims, contents and methods of education.
- iii. Indian Schools of Philosophy (Sankhya, Vedanta, Buddhism, Jainism, Islamic traditions) with special reference to the concept of knowledge, reality and values and their Educational implications.
- iv. Contributions of Vivekananda, Tagore, Gandhi and Aurobindo to Educational Thinking. National values as enshrined in the Indian Constitution, and their Educational implications.
- v. Modern concept of Philosophy: Analysis-Logical analysis, Logical Empiricism and Positive relativism - (Morris L. Prigge).

Unit 2: Sociological Foundations of Education.

- i. Relationship of Sociology and Education.
- ii. Meaning, nature of Educational sociology and Sociology of education. Education-as a social sub-system-specific characteristic, Education and the home Education and the community with special reference to Indian society.
- iii. Education and Modernization.
- iv. Education and Politics.
- v. Education and Religion.
- vi. Education and Culture.
- vii. Education and Democracy.
- viii. Socialization of the Child.
- ix. Meaning and nature of Social change.
- x. Education as related to social stratification and social mobility.
- xi. Education as related to social equity and equality of Educational opportunities.
- xii. Constraints on social change in India (Caste, ethnicity, class, language, religion, regionalism).
- xiii. Education of the socially and economically disadvantaged sections of the society with special reference to scheduled castes and scheduled tribes, women and rural population

Unit 3: Psychological Foundations of Education.

- i. Relationship of Education & Psychology. Scope of Educational Psychology, Methods of Educational Psychology: - Experimental, Clinical and Differential.
- ii. Concept of Growth and Development - Physical Development during Childhood and Adolescence, Social Development during Childhood and Adolescence, Emotional Development during Childhood and Adolescence and Intellectual Development during Childhood and Adolescence.
- iii. Individual Differences - Meaning and Areas, Determinants: Role of Heredity and Environment in Developing Individual Differences. Implications of Individual Differences for organizing Educational Programmes.
- iv. Gifted and Mentally Challenged - Meaning and characteristics.
- v. Creativity - Concept, Characteristics, Role of Teacher in Igniting and Developing Creativity, Importance of Creativity in Education.
- vi. Theories of Intelligence, types of intelligence test; Emotional intelligence, Multiple Intelligence, Creativity (Verbal and Non - Verbal).
- vii. Personality and Mental Health – Concepts, major theories of personality, Personality assessment; Adjustment and Mental health.
- viii. Learning - Concept and Meaning. Theories of Learning - Pavlov's Classical Conditioning, Skinner's Operant Conditioning and Learning by Insight.
- ix. Hull's Reinforcement Theory, Lewin's Field Theory, Gagne's Hierarchy of Learning Types and Factors Influencing Learning.
- x. Motivation - Concept of Motivation, Theories of Motivation: Physiological, Psycho-analytical Theory, Murray's Need Theory, Maslow's Theory of Hierarchy of Needs, Theory of Achievement Motivation and Factors affecting Motivation.

Unit 4: Information and Communication Technology in Education.

- i. Educational Technology as systems approach to Education.
- ii. Systems approach in educational technology and its characteristics.
- iii. Components of educational technology, software, hardware, Multi-media approach in Educational Technology.
- iv. Concept of E- learning, Approaches to E- learning (Offline, Online, Synchronous, Asynchronous, Blended learning, mobile learning).
- v. Emerging Trends in E- learning: Social learning (concept, use of web 2.0 tools for learning, social networking sites, blogs, chats, video conferencing, discussion forum), Open Education Resources (Creative Common, Massive Open Online Courses; Concept and application), E-Inclusion - Concept of E-Inclusion, Application of Assistive technology in E-learning, Quality of E-Learning - Measuring quality of system: Information, System, Service, User

Satisfaction and Net Benefits (D&M IS Success Model, 2003), Ethical Issues for E Learner and E Teacher - Teaching, Learning and Research

- vi. Use of ICT in Evaluation, Administration and Research: E portfolios, ICT for Research - Online Repositories and Online Libraries, Online and Offline assessment tools (Online survey tools or test generators) - Concept and Development.

Unit 5: Teacher Education.

- i. Meaning, Nature and Scope of Teacher Education; Types of Teacher Education Programs, The Structure of Teacher Education Curriculum and its Vision in Curriculum Documents of NCERT and NCTE at Elementary, Secondary and Higher Secondary Levels, Organization of Components of Pre-service Teacher Education Transactional Approaches (for foundation courses) Expository, Collaborative and Experiential learning.
- ii. Understanding Knowledge base of Teacher Education from the view point of Schulman, Deng and Luke & Habermas, Meaning of Reflective Teaching and Strategies for Promoting Reflective Teaching, Models of Teacher Education - Behaviouristic, Competency-based and Inquiry Oriented Teacher Education Models.
- iii. Concept, Need, Purpose and Scope of In-service Teacher Education, Organization and Modes of In-service Teacher Education, Agencies and Institutions of In-service Teacher Education at District, State and National Levels (SSA, RMSA, SCERT, NCERT, NCTE and UGC), Preliminary Consideration in Planning in-service teacher Education programme (Purpose, Duration, Resources and Budget).
- iv. Concept of Profession and Professionalism, Teaching as a Profession, Professional Ethics of Teachers, Personal and Contextual factors affecting Teacher Development, ICT Integration, Quality Enhancement for Professionalization of Teacher Education, Innovation in Teacher Education.

Unit 6: Methodology of Educational Research.

- i. Characteristics of Educational research.
- ii. Planning the research study; review of the literature – purpose and references, using database and internet; formulation of objectives and hypotheses (different types), variables - types and inter-relationship, preparation of research proposal.
- iii. Research Paradigms in Education: Quantitative, Qualitative and Mixed - Characteristics and types Quantitative methods- Experimental (True experimental designs and quasi-experimental designs), internal and external validity of results in experimental research; descriptive (survey, casual comparative, correlational programme evaluation), Qualitative Methods- Ethnography, Phenomenology, Case study, Historical Research, Mixed Research-strengths and weakness Characteristics of Educational Research.

Unit 7: Sampling and Tools/ Techniques of data collection.

- i. Sampling: Representative and biased sample; Random sampling techniques - simple, systematic, stratified, cluster sampling and multi - stage sampling; Non - Random Sampling, technique - convenience sampling, proportionate sampling, Quota sampling and snowball sampling; sampling in qualitative research.
- ii. Tools / Techniques data collection: Characteristic of a good research tool, tests inventories and scales-Types-construction and uses, Questionnaire-Forms, Principles and Construction, Administration of Questionnaires. Interview -Types Characteristics and Guidelines for conducting Interviews. Observation-Types, Rating Scale, Check List, Schedules, Focus group discussion.

Unit 8: Analysis of Data.

- i. Data types - Nominal, Ordinal, Interval and Ratio data levels individual and group.
- ii. Description and Comparison of Groups, Measures of Central Tendency, Dispersion, Characteristics and Uses. Normal distribution (NPC)-characteristics. Deviation from normality and underline causes. Correlation-Types (Spearman, Pearson, Biserial, Point-biserial, Tetrachoric, Partial and Multiple). Regression analysis.
- iii. Testing of hypotheses; levels of significance, types of error, sampling distribution, sampling error, standard error: parametric test: t-test, f-test, ANOVA, ANCOVA- Concepts, assumption and uses. Non -Parametric tests- chi-square, sign test, median test. Analysis of Qualitative data-content analysis, transcription.

Faculty of Commerce and Management

Commerce

1. Business Environment- Concepts and elements of business environment: Economic environment- Economic systems, Economic policies(Monetary and fiscal policies); Political environment-Role of government in business; Legal environment- Consumer Protection Act, FEMA; Socio-cultural factors and their influence on business; Corporate Social Responsibility.
2. Accounting and Finance - Basic accounting standard and principles, Journal & Ledger entries, Final Accounts, Partnership Accounts, Dissolution and Cash Distribution Advanced Company Accounts : Issue, forfeiture, Purchase of Business Liquidation, Valuation of shares, Amalgamation, Absorption Reconstruction, Holding Company Accounts.
3. Cost and Management Accounting - Ratio Analysis, Funds Analysis, Cash Flow Analysis, Marginal costing and Break-even analysis, Standard costing Budgetary control, Costing for decision-making Responsibility accounting.
4. Financial Management - Basic Concept of Financial Management, Time Value of Money, Capital Structure, Capital Budgeting, Cost of Capital, Working Capital Management.
5. Banking and International Business - National Income, Inflation, Business Cycle, Foreign Trade, Business Environment and Policy Framework in India, International Business, Balance of Payment, International Banking, Foreign Exchanges And Foreign Trade Policy. Banking Structure, Types of Banks & Their Functions, Role Of RBI, SEBI, NABARD & Rural Banking, E- Banking, Financial Institutions, Financial Regulators, Banking Sector Reforms.
6. Economics - Demand And Supply, Indifference Curve Analysis, Production Theory, Cost & Revenue, Various Markets and Pricing Strategies, Price determination in different market situation: Perfect competition, Monopolistic competition, Monopoly, Price discrimination and Oligopoly, Pricing Strategies.

7. Human Resource Management - Importance of Human Resource Management; Challenges Faced by a modern Human Resource Manager; Broad Functions of an HRM Department, Determination of HR Requirements, Need and Types of HR Policies; Indian Labour Policy; Job Analysis; Purposes, uses, contents, steps and techniques, Recruitment and Selection process.
8. Marketing Management -Marketing Concepts; Marketing Mix; Strategic Marketing Planning, Marketing Environment – Macro and Micro Components and their Impact on Marketing Decisions, Market Segmentation; Buyer Behaviour.
9. Business Statistics & Data Processing - Data types, Data collection and analysis, sampling, need, errors and methods of sampling, Normal distribution, Hypothesis testing, Analysis and Interpretation of Data Correlation and Regression, small sample T-test, F-test and chi-square test Data processing - Elements. Data entry, Data processing and Computer application to Functional Areas Accounting, Inventory control.
10. Taxation -Direct and Indirect Taxes in India. Definitions, Residential Status and tax liability, Exempted Incomes, Computation of Income various heads of income, clubbing of income, set off and carry forward of losses, Deductions from Gross Total Income Salient features of assessment of individual, Hindu Undivided Family, Firm and Company. Tax deduction and source, Advanced Payment of Tax
Customs: Important terms and definitions under the Customs Act, 1962, Kinds of duties, Prohibition of Export and Import of Goods and Provisions regarding notified and specified goods.

Management

Unit 1: Principles of Management and Organizational Behavior

This unit covers foundational theories, processes, and behavioral aspects of management, emphasizing how individuals and groups function within organizations.

Evolution of Management Thought: Classical approaches (scientific management by Taylor, administrative theory by Fayol, bureaucracy by Weber); neo-classical (human relations by Mayo, behavioral science); modern theories (systems, contingency,

quantitative); contemporary perspectives (total quality management, learning organizations).

Management Functions: Planning (types, process, MBO, decision-making models like rational, bounded rationality, Vroom-Yetton); organizing (structures: functional, divisional, matrix, network; authority, delegation, span of control, centralization vs. decentralization); staffing (recruitment, selection basics); directing (leadership theories: trait, behavioral, situational like Fiedler, Hersey-Blanchard; motivation theories: Maslow's hierarchy, Herzberg's two-factor, expectancy by Vroom, equity by Adams); controlling (types: feedforward, concurrent, feedback; techniques: budgeting, audits, balanced scorecard).

Organizational Behavior Fundamentals: Nature and scope; models (autocratic, custodial, supportive, collegial); individual behavior (personality theories: Big Five, MBTI; perception: process, biases like halo effect, stereotyping; attitudes: components, job satisfaction, organizational commitment; learning: classical/operant conditioning, social learning).

Group Dynamics and Interpersonal Relations: Group formation (stages by Tuckman), types (formal/informal), cohesion, norms; team building, conflict management (sources, styles: avoiding, accommodating, competing, compromising, collaborating); power and politics (bases of power by French-Raven, political tactics).

Organizational Culture and Change: Culture elements (artifacts, values, assumptions by Schein); types (strong/weak, adaptive); change management (Lewin's model: unfreeze-change-refreeze; Kotter's 8-step process; resistance to change, strategies to overcome); stress management (sources: role conflict, ambiguity; coping mechanisms); emotional intelligence (Goleman's model).

Emerging Topics: Diversity and inclusion (workforce diversity, glass ceiling); ethics in management (ethical dilemmas, CSR models like Carroll's pyramid); globalization's impact on OB.

Unit 2: Human Resource Management and Marketing Management

This unit focuses on people management and market-oriented strategies, including contemporary practices in HR and marketing.

Human Resource Management: HRM evolution, models (Harvard, Michigan); strategic HRM (alignment with business strategy); HR planning (demand/supply forecasting, succession planning); job analysis (methods: observation, questionnaire; job description/specification); recruitment and selection (sources: internal/external; processes: screening, tests, interviews like behavioral, situational; e-recruitment).

Training and Development: Needs assessment (task, person, organization analysis); methods (on-the-job: coaching, job rotation; off-the-job: lectures, simulations); evaluation (Kirkpatrick's four levels); performance appraisal (methods: graphic rating, BARS, 360-degree, MBO; biases: leniency, central tendency); compensation (wage structures, incentives, benefits; theories: equity, reinforcement).

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

Employee Relations and Contemporary HR: Industrial relations (trade unions, collective bargaining, grievance handling); employee engagement (drivers, measurement); talent management (acquisition, retention); work-life balance, diversity management; HR analytics (metrics: turnover rate, ROI on training); international HRM (expatriate management, cultural dimensions by Hofstede).

Marketing Management: Marketing concepts (production, product, selling, marketing, societal, holistic); marketing environment (micro: customers, competitors; macro: PESTEL); market research (process, tools: surveys, focus groups; qualitative/quantitative data).

Consumer Behavior and Segmentation: Buying process (problem recognition, information search, evaluation, purchase, post-purchase); influences (cultural, social, personal, psychological: motivation, perception); segmentation (bases: demographic, psychographic, behavioral, geographic); targeting (undifferentiated, differentiated, concentrated); positioning (strategies, perceptual mapping).

Marketing Mix and Strategies: Product (levels: core, actual, augmented; life cycle stages, strategies); branding (equity, extensions, co-branding); pricing (methods: cost-plus, value-based, skimming, penetration; factors: demand, competition); place (channels: direct/indirect, wholesaling, retailing; supply chain management); promotion (IMC: advertising, PR, sales promotion, personal selling, direct marketing); digital marketing (SEO, social media, content marketing); services marketing (7Ps, gaps model by Parasuraman); international marketing (entry modes: exporting, joint ventures, FDI; standardization vs. adaptation).

Unit 3: Financial Management and Operations Management

This unit addresses financial decision-making and operational efficiency, with emphasis on tools and techniques.

Financial Management: Objectives (profit maximization vs. wealth maximization); financial statements (balance sheet, income statement, cash flow); ratio analysis (liquidity: current, quick; profitability: ROI, ROE; leverage: debt-equity; activity: inventory turnover); time value of money (PV, FV, annuities, perpetuities; compounding/discounting).

Capital Budgeting: Techniques (payback, discounted payback, NPV, IRR, MIRR, profitability index); risk analysis (sensitivity, scenario, simulation); cost of capital (WACC, component costs: debt, equity via CAPM, preferred stock).

Capital Structure and Dividend Policy: Theories (Modigliani-Miller with/without taxes, trade-off, pecking order); leverages (operating, financial, combined; EBIT-EPS analysis); dividend theories (relevance: Walter, Gordon; irrelevance: MM); policies (stable, residual, low-regular-plus-extra).

Working Capital Management: Concepts (gross/net); financing (aggressive, conservative, moderate); cash management (models: Baumol, Miller-Orr); receivables (credit policy, aging schedule); inventory (EOQ, ABC analysis, JIT).

Operations Management: Nature and scope; production planning (types: mass, batch, job; forecasting methods: qualitative like Delphi, quantitative like moving average, exponential smoothing, regression); facility location (factors, models: factor rating, center of gravity).

Supply Chain and Quality Management: SCM (components: procurement, production, distribution; bullwhip effect); inventory control (models: deterministic, probabilistic); quality (TQM principles, Deming's 14 points; tools: Pareto, fishbone, control charts; Six Sigma DMAIC process; ISO standards); lean manufacturing (5S, Kaizen, value stream mapping); project management (PERT/CPM: network diagrams, critical path, crashing).

Unit 4: Managerial Economics, Quantitative Techniques, and Strategic Management

This unit integrates economic principles, data analysis, and long-term planning for managerial decision-making.

Managerial Economics: Scope and nature; demand analysis (law of demand, elasticity: price, income, cross; determinants; forecasting techniques: survey, statistical); supply analysis (law, elasticity); cost concepts (fixed/variable, explicit/implicit, opportunity; short-run/long-run curves; economies/diseconomies of scale).

Market Structures: Perfect competition (features, equilibrium); monopoly (price discrimination, barriers); monopolistic competition (product differentiation, excess capacity); oligopoly (models: Cournot, kinked demand, cartel; game theory basics: Nash equilibrium, prisoner's dilemma).

Macroeconomic Environment: National income (GDP measurement: expenditure, income, value-added; circular flow); business cycles (phases, indicators); inflation (types: demand-pull, cost-push; measurement: CPI, WPI); monetary/fiscal policy (tools: interest rates, taxes, government spending).

Quantitative Techniques: Descriptive statistics (measures: mean, median, mode, variance, standard deviation; skewness, kurtosis); probability (concepts: addition/multiplication rules, Bayes' theorem; distributions: binomial, Poisson, normal); inferential statistics (sampling distributions, confidence intervals; hypothesis testing: null/alternative, type I/II errors, p-value).

Advanced Quantitative Tools: Correlation (Pearson, Spearman); regression (simple/multiple, least squares, R-squared); time series analysis (components: trend, seasonal, cyclical; decomposition); index numbers (Laspeyres, Paasche, Fisher's); decision theory (payoff matrix, maximin, minimax regret, expected value).

Strategic Management: Process (formulation, implementation, evaluation); environmental scanning (external: PESTEL, Porter's five forces; internal: SWOT, VRIO, value chain); strategy types (corporate: growth via Ansoff matrix, stability, retrenchment; business: cost leadership, differentiation, focus by Porter; functional); portfolio analysis (BCG matrix, GE-McKinsey); global strategies (modes, challenges); corporate governance (board roles, agency theory); sustainability and ethics in strategy.

ADICHUNCHANAGIRI UNIVERSITY

Estd. under ACU Act, 2012 (Karnataka Act No. 18 of 2013)

B G Nagara - 571448, Karnataka, India

Faculty of Nursing **Community Health Nursing**

1. Health care delivery

Health care environment, economics, constraints, planning process, policies, political process vis a Nursing profession. Patterns of Nursing care delivery in India. □ Health care delivery concerns, national health and family welfare programs, inter-sectoral

2. Epidemiology

Scope, epidemiological approach and methods, Morbidity, mortality, Concepts of causation of diseases and their screening, Application of epidemiology in health care delivery, Health surveillance and health informatics.

3. Bio-Psycho social pathology

Pathophysiology and Psychodynamics of disease causation. Life processes, homeostatic mechanism, biological and psycho-social dynamics in causation of disease, life style.

Common problems: Oxygen insufficiency, fluid and electrolyte imbalance, nutritional problems, hemorrhage and shock, altered body temperature, unconsciousness, sleep pattern and its disturbances, pain, sensory deprivation.

Treatment aspects: pharmacological and pre- post-operative care aspects, Cardio pulmonary resuscitation. End of life Care. Infection prevention (including HIV) and standard safety measures, bio-medical waste management. Role of Nurse- Evidence based Nursing practice; Best practices. Innovations in Nursing.

4. Philosophy and Theories of Nursing

Values, Conceptual Models, Approaches.

Nursing theories: Nightingale's, Henderson's, Roger's, Peplau's, Abdella's, Lewine's, Orem's, Johnson's, King's, Neuman's, Roy's, Watson Parsce, etc and their applications, Health belief models, communication and management, etc. Concept of Self health. Evidence based practice model.

5. Psychological aspects and Human relations

Human behavior, Life processes & growth and development, personality development, defense mechanisms, organizational behavior Basic human needs, Growth and development, (Conception through preschool, School age through adolescence, Young & middle adult, and Older adult), Sexuality and sexual health. Stress and adaptation, crisis and its intervention, Coping with loss, death and grieving, Principles and techniques of Counseling.

6. Computer applications for patient care delivery system and Nursing Practice

Use of computers in teaching, learning, research and Nursing practice. Windows, MS office: Word, Excel, Power Point, Internet, literature search, Statistical packages, Hospital management information system: software.

7. Introduction to Mental Health and Mental Illness

Historical perspectives ,Trends, issues and magnitude ,Contemporary practices. Mental health laws /Acts. National mental health program -National mental health authority, state mental health authority. Human rights of mentally ill Mental Health/ Mental Illness Continuum .Classification of mental illnesses-ICD, DSM.

8. Theories of Personality Development and relevance to Nursing practice

Psychoanalytic Theory- Freud's. Interpersonal Theory-Sullivan's. Theory of Psychosocial Development-Erikson's. Theory of object relations. Cognitive Development Theory. Theory of Moral Development .A Nursing Model-Hildegard E. Peplau

9. Stress and its management

An introduction to the concepts of stress, Psychological Adaptation to stress ,Stress as a Biological Response. Stress as an Environmental Event. Stress as Transaction between the Individual and the Environment. Stress management.

10. Therapeutic communication and interpersonal relationship

Review communication process, factors affecting communication, Communication with individuals and in groups, Techniques of therapeutic communication-touch therapy, Barrier of communication with specific reference to psychopathology, Therapeutic attitudes. Dynamics of a therapeutic Nurse-client relationship; Therapeutic use of self. Gaining self-awareness, Therapeutic Nurse-patient relationship its phases; Conditions essential to development of a therapeutic relationship. Therapeutic impasse and its management.

11. Therapies in Psychiatry

Psycho social and physical therapies, Electroconvulsive Therapy, Psychopharmacology.

12. Management of various psychiatric disorders

Childhood disorders, schizophrenia, mood disorders, substance use disorders, delirium, dementia, phobia and conversion disorder, Gender identity disorders.

Psychiatric / Mental Health Nursing

Unit I – Foundations of Mental Health and Psychiatric Nursing

- Concepts of mental health and mental illness
- History, scope and trends in psychiatric nursing
- Classification of mental disorders – ICD and DSM
- Mental health services and multidisciplinary team
- National mental health programmes and policies

- Ethical, legal and human rights issues in mental health

Unit II – Psychobiology, Personality and Psychopathology

- Neurobiology of mental disorders and neurotransmitters
- Genetics and biological factors in mental illness
- Personality theories and human development
- Psychopathology and disorders of thought, perception, mood, behaviour and cognition
- Psychological and sociocultural factors influencing mental health

Unit III – Psychiatric Assessment and Nursing Process

- Psychiatric history and Mental Status Examination
- Psychosocial and risk assessment
- Therapeutic communication and nurse–patient relationship
- Psychiatric nursing process and care planning
- Psychometric assessment and documentation

Unit IV – Psychiatric Disorders and Nursing Management

- Schizophrenia and other psychotic disorders
- Mood disorders
- Anxiety, obsessive-compulsive and trauma-related disorders
- Personality, eating, somatic and neurocognitive disorders
- Child and adolescent psychiatric disorders
- Geriatric and psychiatric disorders associated with physical illness

Unit V – Therapeutic Modalities and Psychiatric Emergencies

- Psychopharmacology and nursing responsibilities
- Electroconvulsive therapy
- Individual, group, family and behavioural therapies
- Cognitive Behaviour Therapy and supportive psychotherapy
- Milieu therapy and psychoeducation
- Management of suicide, aggression, acute psychosis and other psychiatric emergencies
- Substance-use disorders and rehabilitation

Unit VI – Community Mental Health and Advanced Psychiatric Nursing

- Community mental health services and prevention
- Mental health promotion and early intervention
- Community psychiatric nursing and home-based care
- Psychosocial rehabilitation and recovery
- Family and caregiver interventions
- Advanced psychiatric nursing practice
- Evidence-based psychiatric nursing and current trends in mental health care

Medical Surgical Nursing

UNIT I – Foundations, Trends & Advanced Health Assessment

- Advanced nursing practice and doctoral-level nursing roles
- Pathophysiological basis of major acute and chronic illnesses
- Complex health conditions and multimorbidity
- Advanced history taking and physical examination
- Nutritional, functional and psychosocial assessment
- Diagnostic and laboratory investigations
- Advanced clinical reasoning and decision-making

UNIT II – Advanced Management of Medical Disorders

- Gastrointestinal disorders
- Neurological disorders
- Respiratory disorders
- Cardiovascular disorders
- Hematological disorders
- Endocrine disorders
- Genitourinary disorders
- Musculoskeletal and integumentary disorders
- Eye, ENT and reproductive disorders
- Pathophysiology, diagnosis, treatment and advanced nursing management

UNIT III – Advanced Surgical & Critical Care Nursing

- Ostomy care
- Pain management
- Infection prevention and control
- Enhanced recovery after surgery
- Critical care nursing
- Shock, sepsis and organ dysfunction
- Mechanical ventilation and hemodynamic monitoring
- Rehabilitation and continuity of care

UNIT IV – Chronic Diseases, Renal & Geriatric Nursing

- Chronic disease management and self-care
- Chronic kidney disease and renal replacement therapy
- Hemodialysis and peritoneal dialysis
- Diabetes and cardiovascular disease management
- Cancer and palliative care
- Geriatric assessment and common health problems
- Frailty, dementia and polypharmacy
- Elder abuse and caregiver support
- Quality of life and patient-centred care

UNIT V – Emergency, Trauma & Multisystem Disorders

- Emergency assessment and triage
- Trauma and burns
- Poisoning
- Shock and disseminated intravascular coagulation
- Acute respiratory and renal failure
- Sepsis and multisystem organ dysfunction
- Disaster management
- Advanced resuscitation
- Rehabilitation and follow-up

QUESTION PAPER PATTERN

The Ph.D. entrance examination question paper pattern is as follows:

- (i) 40% of questions will be on Research Aptitude and 60% of questions will be on respective Domain Specific subject covering respective Masters Course syllabus.
- (ii) Duration of the examination is 100 minutes.

PART A – Research Aptitude (40 Marks)

Feature	Details
Marks	40
Number of Questions	40
Duration	40 minutes
Objective	To assess research aptitude, analytical thinking, understanding of research methodology, ethics and academic writing

PART B – Domain Specific Paper (60 Marks)

Feature	Details
Marks	60
Number of Questions	60
Duration	60 minutes
Objective	To evaluate mastery of the subject area and understanding of current trends, applied knowledge and problem-solving within the discipline
